VIRTUAL: I - Critical Pedagogies and Praxis in and Against Capitalism

10:00 - 11:30 Tuesday, 1st July, 2025 Zoom Track *I: Alternatives to Capitalism Session type Virtual Birgan Gokmenoglu, Yasemin Bavbek

This panel focuses on alternative sites of education and liberatory praxis outside of formal higher education. We bring together scholars and activists who practice critical pedagogies in settings such as prisons, social movements, supplementary schools, and community-engaged research. We will be reflecting on these settings as prefigurative loci of critical pedagogies and praxis, where critique and transformative action come together. We take these spaces, our collaborative practices, the relationships we build, and the theories that we use and coproduce as part of a transformative politics that aims to radically change existing structures of oppression. Situating these political pedagogies in their historical, social, and economic context, we will discuss alternative ways to approach political education, learning, and research that subvert and challenge structures of domination. The invited panelists' contributions will be based on a range of experiments and experiences - from Jineolojî and the Kurdish movement in Kurdistan, to an alternative supplementary school in Manchester, UK, from a collective of scholars and educators in the US that fights for abolishing the carceral state, to a community-based oral history project with queer and trans Sikhs in California, US. In this reflexive conversation, we will touch upon the transformative and liberatory powers of care, friendship, the commons, collaborative archiving practices, and doing research, among other salient topics. We are hoping that rethinking critical theory and political learning in these spaces will reinvigorate discussion of alternatives to higher education, engaged research, the carceral state, and activist practices in the context of, but against, the colonial, neo-imperialist, "white supremacist capitalist hetero-patriarchy" (hooks, 2006). Although the papers in this panel are not directly based on the Palestinian case, we believe it will be a good opportunity to think about how we learn from the Palestinian experience and teach on the ongoing genocide.

Track **Featured Events Session type Virtual Aidan Regan

Featured Session: Democracy after globalism: States, social movements, and recognition claims A conversation between Michèle Lamont and Wolfgang Streeck

Description

What is the future of democracy in a polarized post-globalisation world? How do we move toward more inclusive societies at a time of growing economic, political, and social divisions? Can states still assert democratic control over capitalist markets – or will they be increasingly repurposed to shield capitalism from democracy?

In this panel, Aidan Regan will moderate a discussion between Michèle Lamont and Wolfgang Streeck, who draw on their findings and arguments from two recent books.

In Seeing Others, Lamont argues that challenging deeply entrenched inequalities under neoliberalism requires new narratives that empower and dignify historically stigmatized groups. She studies 'change agents' who are developing and using these narratives in different settings. Social movements and citizens thus need to promote a new politics of recognition – focusing not only on reducing economic or material inequalities, but also reducing inequalities produced and sustained by recognition gaps.

In *Taking Back Control*?, Streeck confronts the ongoing tug of war between the imperatives of global capitalism and the demands of democratic self-rule. As hyper-globalisation collapses under the weight of its own contradictions - economic crises, social discontent, and geopolitical disorder - Streeck argues that the nation-state is re-emerging as the only institution capable of mediating these forces. Social movements thus should resist further political centralization, taking back control from mega-states and returning the center of governance to smaller, more self-sufficient national democracies.

Each book confronts the question of how we build vibrant democracies through a different lens, from the cultural sociology of identity and difference to the political economy of states and state systems. Lamont and Streeck will engage with each other's books, while applying their insights to recent developments in North America and Europe.

VIRTUAL: S - The Politics of Green Growth Models: Europe

04:00 - 05:30 Thursday, 3rd July, 2025 Zoom Track *S: Environment and Climate Change Session type Virtual Daniel Driscoll

Economic growth has historically gone hand in hand with ever greater greenhouse emissions, leading to global warming. Today this link threatens the future of the planet and of humanity. Governments everywhere, independently of political hue and level of development, are under pressure to decarbonize their economies. How do they respond to this challenge? These panels, representing authors from the 'Politics of Green Growth Models' edited book project, examines this guestion through the lens of growth model theory (Baccaro, Blyth and Pontusson 2022). Growth model (GM) theory is becoming the theoretical framework of choice for comparative political economy analysis. So far, the engagement of GM theory with the problems of decarbonization and the green transition has been limited (see, however, Ausserladscheider 2024; Copley 2022; Driscoll 2024; Nahm 2022). Thus, GM theory has been criticized for assuming that economies and human welfare are functionally independent from the planet (Green 2022). Applying GM theory to problems of decarbonization not only addresses this criticism but also contributes substantive knowledge to existing accounts of the politics of decarbonization going beyond existing pluralist and neocorporatist accounts (Schwander and Fischer 2024), identifying exactly which interest groups matter, when and in which contexts. Our guiding assumption is that interest group influence depends on the particular growth model and dominant growth coalition in place. Countries in which the dominant growth coalition stands to benefit from decarbonization, either because it is already strong in green sectors (e.g. in green manufacturing) and because important sectors see decarbonization as an opportunity enter into new markets or to reinforce their market presence are likely to be advocates of decarbonization (Kupzok and Nahm 2024). Conversely, when the dominant growth coalition is strongly anchored in carbon-intensive sectors and the 'decarbonizable' sectors (those with a stake in the green transition) are not sufficiently large and influential, the government response is likely to be stunted and aimed primarily at shoring up the existing growth models from international and domestic pressure. A case in point is the response of petrostates to the decarbonization threat. This panel, comprised of several chapters from the book project, engages with these themes.

VIRTUAL: S - The Politics of Green Growth Models: Global South

12:00 - 13:30 Thursday, 3rd July, 2025 Zoom Track *S: Environment and Climate Change Session type Virtual Daniel Driscoll

Economic growth has historically gone hand in hand with ever greater greenhouse emissions, leading to global warming. Today this link threatens the future of the planet and of humanity. Governments everywhere, independently of political hue and level of development, are under pressure to decarbonize their economies. How do they respond to this challenge? These panels, representing authors from the 'Politics of Green Growth Models' edited book project, examines this question through the lens of growth model theory (Baccaro, Blyth and Pontusson 2022). Growth model (GM) theory is becoming the theoretical framework of choice for comparative political economy analysis. So far, the engagement of GM theory with the problems of decarbonization and the green transition has been limited (see, however, Ausserladscheider 2024; Copley 2022; Driscoll 2024; Nahm 2022). Thus, GM theory has been criticized for assuming that economies and human welfare are functionally independent from the planet (Green 2022). Applying GM theory to problems of decarbonization not only addresses this criticism but also contributes substantive knowledge to existing accounts of the politics of decarbonization going beyond existing pluralist and neocorporatist accounts (Schwander and Fischer 2024), identifying exactly which interest groups matter, when and in which contexts. Our guiding assumption is that interest group influence depends on the particular growth model and dominant growth coalition in place. Countries in which the dominant growth coalition stands to benefit from decarbonization, either because it is already strong in green sectors (e.g. in green manufacturing) and because important sectors see decarbonization as an opportunity enter into new markets or to reinforce their market presence are likely to be advocates of decarbonization (Kupzok and Nahm 2024). Conversely, when the dominant growth coalition is strongly anchored in carbon-intensive sectors and the 'decarbonizable' sectors (those with a stake in the green transition) are not sufficiently large and influential, the government response is likely to be stunted and aimed primarily at shoring up the existing growth models from international and domestic pressure. A case in point is the response of petrostates to the decarbonization threat. This panel, comprised of several chapters from the book project, engages with these themes.

H - Banking diversity in advanced economies: causes and consequences

08:30 - 10:00 Wednesday, 9th July, 2025 520F Track *H: Markets, Firms and Institutions Session type On-site (Palais des Congrès) Paolo Coccorese

This panel aims at presenting state-of-the-art research on banking diversity, from a dual perspective: law and economics. It presents results of a multi-year, multi-disciplinary project on banking diversity financed by the Italian Ministry of Higher Education. The overall goal of the research project is to provide a better understanding of the causes and consequences of banking diversity, especially in terms of inclusive growth and sustainable development. In particular, the core research questions addressed by the project are the following: (1) To what

extent does Italy's banking diversity enhance sustainable development at the local level? (2) How has banking diversity evolved in Europe over the past decade? (3) To what extent do institutions, and in particular regulatory institutions, explain cross-country variation in within-country financial and banking diversity, among Italy, France, Germany and Spain? Each of the papers presented and discussed in this panel concerns one aspect of the research project; together, the three papers presented here address the problems associated both with the causes of evolving (declining) banking diversity in Europe, as well as its consequences. This panel thus aims to contribute to the ongoing debates about sustainable finance, its economic impact and its legal and regulatory underpinnings.

E - Unions, new challenges and new solidarities

10:30 - 12:00 Wednesday, 9th July, 2025 520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Lorenzo Frangi This panel strikes synergy across four papers that contribute to the understanding of new challenges and solidarities for trade unions. The first paper traces how unions answer to globalization challenges by finding global solidarity in Global Union Federations. The second paper analyzes the challenges faced by unions in impacting the transition in the automotive industry towards EBV, and to what extent this can be (un)just. Labour solidarity can be enhanced by unions leveraging workers' skills, or transcending them, each strategy bringing a set of constraints and opportunities, as explained by the third paper. Finally, paper four brings attention to the making and shaping of student labour unions, specifically of the union experience of their leaders, and its legacy; a long-term analysis of challenges and solidarities.

E - The Political Economy of Growth Model Decarbonization: Interest Groups, Welfare States, and Institutional Change.

10:30 - 12:00 Wednesday, 9th July, 2025 520C

Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Sebastian Kiecker, Anna Hehenberger

This panel brings together cutting-edge research on the political economy of growth model decarbonization, focusing on how national institutions, interest groups, and welfare state structures shape varying responses to the energy transition. By examining the interplay between industrial restructuring, distributive conflicts, and institutional dynamics, the panel offers a comprehensive view of how different growth models adjust and restructure amid the energy transition. Sonja Avlijaš (University of Belgrade) examines Central and Eastern European (CEE) welfare states in The Green Transition and Welfare State Foundations of Central and Eastern European Growth Regimes. Avlijaš analyzes how export-oriented, FDI-driven growth regimes adapt to green transition pressures and crises. Incremental changes in welfare policies, such as increased labor market inclusivity and rising social spending, are evident but uneven. By focusing on Visegrad and Baltic countries, the paper highlights how domestic politics, EU-level shifts, and middle-income trap pressures shape CEE welfare state trajectories.Christian Lyhne Ibsen (University of Copenhagen) addresses green backlash and ecosocial policymaking in Decarbonizing Agriculture: Lessons from the Multi-Partite Agreement in Denmark. Ibsen analyzes Denmark's 2024 agreement on agricultural decarbonization, which introduced greenhouse gas taxes and landuse reforms. The agreement disarmed opposition by involving diverse stakeholders-farmers, labor, industry, and NGOs-while providing financial concessions to farmers. The paper identifies key strategies for overcoming green backlash, including strategic interest group inclusion, reliance on independent expertise, and targeted compensation mechanisms. Anna Hehenberger (Max Planck Institute for the Study of Societies) examines exportled decarbonization in Green Vanguards and Dependent Followers: Decarbonization in Small Export-Led Economies. Comparing Denmark and Austria, Hehenberger shows how global demand shifts drive decarbonization in export-oriented manufacturing sectors, often preceding domestic climate policies. Denmark developed a dominant green industry, while Austria's manufacturing sector decarbonized under supply chain pressures. The paper highlights the critical role of manufacturing capabilities in driving green transitions. Sebastian Kiecker (University of Tartu) presents Industrial Exposure and the Politics of Decarbonization: Rethinking Growth Model Restructuring in the Energy Transition. Kiecker explores how European growth models adapt to the energy shock caused by Russia's invasion of Ukraine and the accelerating energy transition. By decomposing growth regimes on an industry level and categorizing industries by their exposure to energy transition pressures - into fossil, green, decarbonisable, and bystander industries - the paper highlights how industry-specific transition costs and energy security considerations shape policy responses that diverge from expectations of the conventional growth models literature. Together, these papers explore how institutions, coalitions, and welfare states mediate

the challenges of decarbonization. Key questions include: How do structural economic constraints shape decarbonization pathways? What roles do interest groups and welfare states play in managing distributive conflicts? And how can countries align economic resilience with sustainability and social inclusivity? Synthesizing diverse cases and methods, this panel advances understanding of how Europe's growth models adapt to the demands of decarbonization.

K - Digital disruption as a contested terrain I: Strategic choices and opportunities for better work

10:30 - 12:00 Wednesday, 9th July, 2025 524A

Track *K: Institutional Experimentation in the Regulation of Work and Employment Session type On-site (Palais des Congrès) Lisa Dorigatti, Karen Jaehrling

The digitalization of the labour force has heavily disrupted workers and led to job destruction, economic inequality and deteriorating job quality in recent years. The rapid and disruptive pace of change has attracted considerable attention from labour scholars and practitioners. However, less attention has been paid to how digital technologies are associated with power dynamics in contemporary workplaces. Still, choices around technological implementation and their impact on workers and their employment conditions are shaped not only by the current state of technological innovation (i.e. the availability of specific technological tools), but also by socio-political variables (such as policies and regulations) and the agency of involved actors.

We propose three panels which contribute to the literatures on comparative employment relations and the sociology of work and attempt to advance our understanding of how industrial relations at sectoral and workplace levels shape technological innovations and their effects on workers and employment conditions. These disruptions have important effects on the redistribution of worker power and in shifting the fault lines of institutional experimentation for better work. The three panels explore these issues though different angles. The first panel explores them in the context of standard work, showing how political dynamics at the workplace are influencing the adoption and outcomes of technological change. The second panel looks at these issues in the context of remote work during and since the pandemic, with an emphasis on the role of unions in addressing remote works' impacts on precarity and job quality. The third panel investigates the re-regulation of platform work across diverse institutional and occupational settings.

O - Governing Global Value Chains: The Role of Mandatory Due Diligence in Advancing Human Rights and Environmental Sustainability

10:30 - 12:00 Wednesday, 9th July, 2025 520E Track *O: Global Value Chains

Session type On-site (Palais des Congrès) Janina Grabs

As global value chains (GVCs) expand across borders, their governance has become a pressing concern in addressing environmental and human rights challenges. Legal and regulatory frameworks, particularly mandatory due diligence laws, have emerged as key tools for holding companies accountable. However, these frameworks reflect complex power dynamics, institutional structures, and legal struggles. This panel explores the transformative potential and limitations of such regulations, focusing on their design, implementation, and impact on sustainability and equity in GVCs. The first paper, "The Case for Mandatory Due Diligence: Understanding Canada's Policy Gaps in Human Rights and Environmental Governance", explores why Canada relies on voluntary measures instead of enforceable regulations. It argues that political and legal barriers hinder the adoption of comprehensive due diligence legislation, limiting Canada's ability to address systemic supply chain issues. The second paper, "The Politics of Law in Global Value Chains", examines how law shapes power relations and institutional dynamics among GVC actors. Using a taxonomy of legal mobilization, capture, and struggles, it analyzes labor regulation in Brazil, Bangladesh, Cambodia, and Germany, revealing how legal frameworks both constrain and enable agency within GVCs. The third paper, "Structural Characteristics of the Apparel Supply Chain–Enablers or Barriers to the Influence of Due Diligence Laws?", investigates the alignment between regulatory frameworks and fragmented supply chain configurations. It highlights the need for tailored approaches

that reflect the spatial and organizational complexities of global production networks. The fourth paper, "Promise and Pitfalls of Mandatory Due Diligence for Enhancing Worker Power in Global Value Chains: The Case of South African Wine", analyzes how workers use due diligence frameworks to enhance their agency. It identifies constraints and proposes strategies for leveraging these frameworks to advance labor rights. This panel provides a critical analysis of legal and regulatory interventions, offering insights into the potential of GVC governance to promote sustainability and equity

Reimagining Solidarity in Israel/Palestine: Employment Relations, Political-Economy and Boundary-Making

Description

This panel examines how employment relations and economic interests serve as critical sites for both reinforcing and challenging boundaries in one of the world's most divided societies. At a time when global attention is focused on intensified divisions and violent conflicts, the Israel/Palestine case offers unique insights into the complex relationship between economic interdependence, military occupation and political exclusion. Bringing together Palestinian and Israeli scholars, the panel will examine how different stakeholders - workers, unions, employers, CSOs and social movements - navigate and sometimes challenge established boundaries, to explore how 'imagined communities' are constructed and sometimes transcended through shifting configurations of economic interests and changing employment relations. The panelists will discuss various dimensions including the role of structural inequalities in shaping workplace solidarity; attempts to build cross-community labor organizing despite nationalist divisions; and the political economy of occupation as it shapes (or undermines) possibilities for inclusive solidarity.

The panel will thus highlight the ways economic interdependence creates both constraints and opportunities for transformation in a context where divisions are deeply and increasingly entrenched. Through examining concrete examples of both failed and successful initiatives – before as well as during the current war in Israel/Palestine – the panel contributes to broader discussions about possibilities for inclusive solidarity in increasingly divided times.

E - How to face the twin transition? The politico-economic challenges of digitalization and the green transition

13:15 - 14:45 Wednesday, 9th July, 2025 520B Track *E: Comparative Capitalisms

Session type On-site (Palais des Congrès) Olivier Jacques

In the coming years and decades, contemporary labor markets and political economies are facing the so-called twin transition of digitalization and the green transition towards carbon-neutral economies at the same time. Even though labor markets continuously face structural changes, including pressures from globalisation and demographic changes, the twin transition might constitute a qualitatively different challenge because both digitalization and the green transition proceed significantly faster than previous structural changes and have potentially more far-reaching effects. This panel focuses on the politico-economic implications of the twin transition, analysing for instance the political consequences of labor market changes as well as potential trade-offs between digitalization and the green transition. The latter topic is at the focus of the paper by Stutzmann and Koos who explore citizens' preferences regarding the relative distribution of public spending to either digitalization or the green transition, drawing on novel comparative survey data from six OECD countries. The second paper by Cigna, Di Carlo and Durazzi explores different "worlds of green capitalism" from the perspective of comparative political economy scholarship. They show how different comparative institutional advantages in "green capitalism" are systematically associated with different types of capitalism as well as particular skill formation institutions. In a third paper, Busemeyer, Beiser-McGrath and de Blok analyse the role of the welfare state in dealing with the challenges of the twin transition. Using new survey data from Germany, they find that individual citizens prioritise social policies over environmental policies even when considering long-term investment policies, implying that public support for the green transition hinges on additional support via the welfare state. The paper by Chueri also studies social policy preferences, revealing potential new conflicts and cleavages in preferences in response to perceived threat of job automation via AI technologies across a large range of OECD countries. Last but not least, the paper by Enggist and Oesch deals with the political consequences of large-scale labor market changes, showing that common narrative of right-wing populism being driven by left-behind voters and workers only finds empirical support in some, but not all country contexts. Olivier Jacques from the University of Montreal will serve as discussant in this panel, reflecting on the broader implications of the findings for discussions in comparative political economy and welfare state research.

K - Digital disruption as a contested terrain II: Power and precarity in remote work

13:15 - 14:45 Wednesday, 9th July, 2025 524A

Track *K: Institutional Experimentation in the Regulation of Work and Employment Session type On-site (Palais des Congrès) Mathieu Dupuis, Sean O'Brady

The digitalization of the labour force has heavily disrupted workers and led to job destruction, economic inequality and deteriorating job quality in recent years. The rapid and disruptive pace of change has attracted considerable attention from labour scholars and practitioners. However, less attention has been paid to how digital technologies are associated with power dynamics in contemporary workplaces. Still, choices around technological implementation and their impact on workers and their employment conditions are shaped not only by the current state of technological innovation (i.e. the availability of specific technological tools), but also by socio-political variables (such as policies and regulations) and the agency of involved actors.

We propose three panels (with this one being part two) which contribute to the literatures on comparative employment relations and the sociology of work and attempt to advance our understanding of how industrial relations at sectoral and workplace levels shape technological innovations and their effects on workers and employment conditions. These disruptions have important effects on the redistribution of worker power and in

shifting the fault lines of institutional experimentation for better work. The three panels explore these issues though different angles. The first panel explores them in the context of standard work, showing how political dynamics at the workplace are influencing the adoption and outcomes of technological change. The second panel looks at these issues in the context of remote work during and since the pandemic, with an emphasis on the role of unions in addressing remote works' impacts on precarity and job quality. The third panel investigates the re-regulation of platform work across diverse institutional and occupational settings.

S - Historical and environmental foundations of urban inequality: Insights from new methodological assemblages

13:15 - 14:45 Wednesday, 9th July, 2025 524C Track *S: Environment and Climate Change Session type On-site (Palais des Congrès) Robert Manduca

In the face of growing racial, spatial, and environmental inequality, the social sciences increasingly turn to historical research to understand the roots of stratification. This turn has been enabled, in part, by advances in computational approaches to studying historical processes. This session highlights emerging research on socioenvironmental and spatial inequality, showcasing five papers that examine a range of longitudinal cases. These include state interventions in mortgage markets and rent regulations; the effects of industrial development on neighborhood inequality and land use; and state regulatory logics of detecting, classifying, and addressing environmental hazards. This session coheres around two central aspects of this theme. First, three papers explore the role of the environment in shaping spatial inequality over time. Amidst a burst of research attributing contemporary stratification outcomes to discrete moments of state action - particularly historical "redlining" maps these papers illuminate how the natural environment, and its amenities and hazards, warrants more attention in this process. Two papers extend research on state intervention in housing to understand diverse and long-term processes of urban inequality formation, over time and across institutions. Second, the papers apply new, computational, and data-intensive methodologies for archival data analysis. Bridging historical, computational, and data-intensive methodologies allows researchers to identify, extract, and organize new data from historical archives; to link across distinct data sources; and to translate across scales and units of analysis. New methodological approaches can reveal theoretical insights and uncover dimensions of urban inequality, governance, and development, as newly accessed primary sources enable fresh interpretations of connections across historical archives. Overall, the papers offer substantive contributions to understanding urban inequality over time and, simultaneously, demonstrate the value of data-intensive approaches to historical analysis. Building on a range of theoretical and methodological advances across fields, this session underscores the potential of interdisciplinary research to reassess theories of social inequality and urban development.

Featured Book Salon: China's Gilded Age: The Paradox of Economic Boom and Vast Corruption by Yuen Yuen Ang

Description

Why has China grown so fast for so long despite vast corruption? In China's Gilded Age, Yuen Yuen Ang maintains that all corruption is harmful, but not all types of corruption hurt growth. Ang unbundles corruption into four varieties: petty theft, grand theft, speed money, and access money. While the first three types impede growth, access money - elite exchanges of power and profit - cuts both ways: it stimulates investment and growth but produces serious risks for the economy and political system. Since market opening, corruption in China has evolved toward access money. Using a range of data sources, the author explains the evolution of Chinese corruption, how it differs from the West and other developing countries, and how Xi's anti-corruption campaign

could affect growth and governance. In this formidable yet accessible book, Ang challenges one-dimensional measures of corruption. By unbundling the problem and adopting a comparative-historical lens, she reveals that the rise of capitalism was not accompanied by the eradication of corruption, but rather by its evolution from thuggery and theft to access money. In doing so, she changes the way we think about corruption and capitalism, not only in China but around the world.

A - Federated Worker Ownership Models: Solutions to Workplace Fissuring?

15:10 - 16:40 Wednesday, 9th July, 2025

518A Track *A: Community, Democracy, and Organizations Session type On-site (Palais des Congrès) Marcelo Vieta, Bernadette King Fitzsimons

This session will present new research and thinking examining worker cooperative models and other forms of worker ownership as tools for securing high-road employment in the context of workplace "fissuring" (Weil 2014). Two of the papers in this session were developed for a major study on worker ownership in California that was commissioned by the state legislature. In 2022, the California Assembly passed the POWER Act calling for research on the creation of an "Association of Cooperative Labor Contractors" to facilitate the growth of democratically run high-road cooperative labor contractors. The resulting study was completed in December 2024. Key report findings will be shared. This session is also motivated by the larger related question of how federations, associations, meta-organizations, and networks that organize services and resources can support democratic organizations and their workers.

E - Right to Strike/Special Issue ILR Review

15:10 - 16:40 Wednesday, 9th July, 2025 520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Jeffrey Vogt

This panel proposal will present two cowritten chapters from a planned special issue of the International Labour Review dedicated to the right to strike. This Special Issue was spearheaded by Tonia Novitz at the University of Bristol Law School (UK) along with the International Trade Union Confederation (ITUC), and Jeffrey Vogt, International Lawyers Assisting Workers (ILAW). This project revisits the role and regulation of the right to strike and the role that it should play in current domestic and transnational labour markets. These two chapters specifically tackle strikes and democracy and strikes and climate change. While only a subset of the special issue, we will provide an overview of the project and then delve into our respective chapters—both represent two of the most compelling contemporary global struggles and the role of organized labour in each.

15:10 - 16:40 Wednesday, 9th July, 2025 521A Track *I: Alternatives to Capitalism Session type On-site (Palais des Congrès) Deissy Perilla

2025 is the midway point of what in the United States has become known to many as "The Decisive Decade" in the transition to a sustainable economy. These papers, offered by scholars involved in building a new "field of fields" in the form of Next System Studies, reach beyond what we think we already know about design alternatives to global capitalism. Together, they bring immediacy to the task before us, seeking to close the alarmingly wide gaps between capacity and necessity.

U - Technology, Empire and Legacies of Colonialism (Hybrid)

15:10 - 16:40 Wednesday, 9th July, 2025 Hybrid - PK-R250 (Pavillon President Kennedy, UQAM) Track *U: Postcolonialism and Legacies of Empire Session type Hybrid (UQAM) Jason Jackson

Ideas and imaginaries of techno-scientific progress have complicated relationships with empire and colonialism. The panel hopes to explore both historic and contemporary relations between technology and colonialism from the perspective of political economy. Some questions of interest are: What were the epistemic and technological bases of imperial state power and accumulation? How did colonial subjects in the periphery buy into, shape or resist technological and infrastructural growth emanating from colonial centers? In what ways do modern techno-economies reproduce legacies of colonialism or problematize them? How do technical experts and other powerful institutions re-interpret or de-politicize colonial histories in the development of modern capitalist orders? The panel invites reflections on the political economy of science and technology, by problematizing preconceived flows, relations and boundaries of categories such as "Western" "colonizer" "indigenous" "Southern" to explore how normative and epistemic orders emerge and stabilize.

2025 is the midway point of what in the United States has become known to many as "The Decisive Decade" in the transition to a sustainable economy. These papers, offered by scholars involved in building a new "field of fields" in the form of Next System Studies, reach beyond what we think we already know about design alternatives to global capitalism. Together, they bring immediacy to the task before us, seeking to close the alarmingly wide gaps between capacity and necessity.

Presidential Address and Awards Ceremony: Virginia Doellgast, "Between exit, voice, and solidarity: The not-so-new challenges to organizing inclusive and democratic economies"

17:00 - 18:30 Wednesday, 9th July, 2025 517C Track **Featured Events Session type On-site (Palais des Congrès)

SASE President Virginia Doellgast will deliver her keynote address, entitled "Between exit, voice, and solidarity: The not-so-new challenges to organizing inclusive and democratic economies". This will be followed by the awards ceremony. All participants are invited to join in the welcome reception immediately following this session.

Presidential Address and Awards Ceremony

Description

SASE Presidential keynote - Virginia Doellgast

Between exit, voice, and solidarity: The not-so-new challenges to organizing inclusive and democratic economies

The social, environmental, and technological disruptions we are experiencing in the current era are often described as unprecedented. From the expansion of international migration to climate change to the rise of AI and the gig economy, the scale of challenges to established institutions seems to call for a new socio-economic paradigm.

In this keynote, I make the case for continuity rather than disruption. I argue that pursuing the extension of social democracy within a market economy—in the past as today—confronts a tension between three goals: how to constrain employer and capital exit from encompassing social institutions, how to support broader democratic worker and citizen voice in the economy and polity, and how to promote inclusive forms of solidarity that bridge divides across the workforce and within societies.

I consider three pairs of historic and contemporary cases from Germany to illustrate both these tensions and how they may be (at least imperfectly) resolved. The long arc of a movement toward constraining markets in ways that advance social equity and justice requires at its core collective labor power, grounded in an inclusive and solidaristic approach to building and sustaining that power.

Featured Panel/T: Patients or 'Profit Centers'? Financialization of Health, Medicines, and Healthcare

08:30 - 10:00 Thursday, 10th July, 2025 517C Track **Featured Events Session type On-site (Palais des Congrès)

Featured Panel: Patients or 'Profit Centers'? Financialization of Health, Medicines, and Healthcare

Description

From the family doctor to the emergency room to the pharmacy, financial interests increasingly determine when, and if, patients have access to care and medicines. Financialization is the process where socio-political economies increasingly depend on and are shaped by investment decisions within capital markets. In the context of healthcare, this is characterized by an increased presence of such financial entities as private equity firms in healthcare provision, profoundly changing accessibility, quality, and the market dynamics of health services. This roundtable dissects the mechanisms through which financialization operates in health, fostering discussion and debate about how stakeholders in the health sector can navigate this 'wicked problem' to foster a more equitable future. Our featured panel offers a breadth and depth of evidence-based expertise in countries around the world.

Rosemary Batt, an expert on the influence of private equity in healthcare in the United States, draws on her extensive research to demonstrate how these investment entities prioritize the extraction of wealth at the expense of the financial stability of healthcare providers and the quality of patient care, while workers bear the hidden
costs. Eileen Appelbaum will focus on the financialization of nonprofit hospitals, how government policies have introduced the profit motive into their decision making, and how Academic Medical Centers and large nonprofit health systems have taken advantage of tax rulings to become enormously profitable.

Matthieu Montalban, specialist of French and European pharmaceutical, digital platforms and private equity industry and more generally on the articulation between driving-industries and institutional and structural transformations of capitalism. He shows how the observed trends towards financialization and the growth of private equity in the healthcare sectors are the result of both institutional choices such as financial liberalization and the problems of relative stagnation and demographic decline in advanced capitalist economies. Steve Casper, who conducts research on the biotech and pharmaceutical industries in Germany, Europe and the United States, reflects on financialization in biotechnology innovation pathways, pointing out the risk aversion that comes with private equity replacing venture capital, potentially stifling breakthrough innovations in healthcare technologies. Paradoxically, this scenario has led to higher profits for private equity investors despite lower risk taking, with serious consequences for innovation and entrepreneurial ecosystems.

The panel is moderated by Kathryn Ibata-Arens, drawing from her work on innovation systems and the comparative political economy of health and medicines in Japan and Asia. This panel aims to decipher the intricate and often hidden web of financial interests within health systems. The discussion will challenge participants to consider how financialization reshapes healthcare and to envision policy and systemic reforms that prioritize health equity and quality of care over profit.

E - The political economy of growth models and economic policy I

08:30 - 10:00 Thursday, 10th July, 2025 520A

Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Sidney Rothstein, Darius Ornston, Donato di Carlo, Mischa Stratenwerth

The growth model perspective advances the comparative capitalist literature by placing the demand-side of the economy at the centre of analysis. Central ambitions of the growth model perspective include the study of how national capitalist diversity relates to the broader context of international political economy, and how politics contribute to the stability or instability of growth models. We propose two distinct sessions to advance this research agenda. One focuses on the varieties of the composition of economic growth, while the other zooms in on actors, social coalitions, and the contested politics of growth models. In this first session, we bring together contributions that examine the role of different growth drivers and components of economic growth, and that reconnect the role of demand- and supply-side factors for economic growth. It includes the following contributions: The first two papers explicitly examine the links between the promotion of innovation and skills and economic performance. Chiara Benassi and Joshua Cova test how indicators of corporatist institutions and social

investment policy are associated with export performance in services, and how these exports differ in terms of sectoral and skill composition. Sonja Avlijaš and Bruno Palier focus on selected country cases to zoom in on how innovation policies shape processes of production and services, as well as knowledge-intensive employment in different sectors of the economy. Political economy research regularly associates social investment policies with the demands on governments to equip their countries for the knowledge economy. At the same time, in many countries radical right parties and their supporters are highly skeptical of such a focus on education and skills. Against this background, Philip Rathgeb, Jimena Valdez and Arianna Tassinari study the growth strategies chosen by radical right parties in three Southern European countries. Finally, the paper by Erik Neimanns examines the links between different growth drivers and their implications for the composition of growth models. Focusing on the implications of house price inflation for economic growth, he examines how the interpretations of house price inflation growth, and wage bargaining outcomes,

Corporatist institutions, the social investment state and the high and low roads to export specialization in services

Featured Panel: Patients or 'Profit Centers'? Financialization of Health, Medicines, and Healthcare

Description

From the family doctor to the emergency room to the pharmacy, financial interests increasingly determine when, and if, patients have access to care and medicines. Financialization is the process where socio-political economies increasingly depend on and are shaped by investment decisions within capital markets. In the context of healthcare, this is characterized by an increased presence of such financial entities as private equity firms in healthcare provision, profoundly changing accessibility, quality, and the market dynamics of health services. This roundtable dissects the mechanisms through which financialization operates in health, fostering discussion and debate about how stakeholders in the health sector can navigate this 'wicked problem' to foster a more equitable future. Our featured panel offers a breadth and depth of evidence-based expertise in countries around the world.

Rosemary Batt, an expert on the influence of private equity in healthcare in the United States, draws on her extensive research to demonstrate how these investment entities prioritize the extraction of wealth at the expense of the financial stability of healthcare providers and the quality of patient care, while workers bear the hidden costs. Eileen Appelbaum will focus on the financialization of nonprofit hospitals, how government policies have introduced the profit motive into their decision making, and how Academic Medical Centers and large nonprofit health systems have taken advantage of tax rulings to become enormously profitable.

Matthieu Montalban, specialist of French and European pharmaceutical, digital platforms and private equity industry and more generally on the articulation between driving-industries and institutional and structural transformations of capitalism. He shows how the observed trends towards financialization and the growth of private equity in the healthcare sectors are the result of both institutional choices such as financial liberalization and the problems of relative stagnation and demographic decline in advanced capitalist economies. Steve Casper, who conducts research on the biotech and pharmaceutical industries in Germany, Europe and the United States, reflects on financialization in biotechnology innovation pathways, pointing out the risk aversion that comes with private equity replacing venture capital, potentially stifling breakthrough innovations in healthcare technologies. Paradoxically, this scenario has led to higher profits for private equity investors despite lower risk taking, with serious consequences for innovation and entrepreneurial ecosystems.

The panel is moderated by Kathryn Ibata-Arens, drawing from her work on innovation systems and the comparative political economy of health and medicines in Japan and Asia. This panel aims to decipher the intricate and often hidden web of financial interests within health systems. The discussion will challenge participants to consider how financialization reshapes healthcare and to envision policy and systemic reforms that prioritize health equity and quality of care over profit.

SASE Women and Gender Forum (WAG) Open Assembly

10:30 - 12:00 Thursday, 10th July, 2025 524A Track **Featured Events Session type On-site (Palais des Congrès)

The SASE Woman and Gender (WAG) Forum will have an open assembly to provide a forum for all those interested in addressing inequalities in academia and discussing strategies to mitigate them. We invite you to participate – no matter your sex, gender, sexual orientation, race or status, no matter if this is your first SASE conference or your 20th – and share your thoughts, experiences, and ideas on the subject in order to shape the direction of future WAG activities. We believe that having this conversation at SASE is particularly meaningful as it allows us to organise beyond our personal institutions, disciplines, and countries. This event will also provide an opportunity for direct involvement in future actions of the WAG Forum. One of our main aims is to offer an opportunity to socialize with fellow academics, offer mutual support, and foster meaningful relationships.

The session will be followed by a catered lunch.

B - Understanding Amazonian Governance of Value Chains for Socio-Economic Upgrading

10:30 - 12:00 Thursday, 10th July, 2025 519B Track *B: Globalization and Socio-Economic Development Session type On-site (Palais des Congrès) Khalid Nadvi

Today, a key task for the socio-economic development of Amazonian communities is to understand how industrial and agricultural processes are governed to better foster global sustainable development goals (SDGs). Private modes of governance in value chains (such as product certification; marketing campaigns; traceability requirements) influence local governance with an impact beyond the chain. This panel presents results of a series of Amazon value chain case studies and analyzes how effective business models and public-private (including NGOs) policy initiatives can lead to sustainable patterns of production in Amazonian communities and consumption in related emerging markets in the Global South. The papers are part of a transdisciplinary project addressing the challenges and opportunities to develop innovative strategies for sustainable value creation capable of integrating economic, social and environmental perspectives in view of promoting upgrading to build bottom-up driven Global Value Chains (GVCs) anchored in Amazonian communities. We will discuss the strategies of companies and communities use for innovation, governance and institutions, and assess the future challenges of governing sustainability in the face of climate challenges and biodiversity loss in the region. The project study modules are based on an integrated Global Value Chain (GVC) and Social-Ecological Systems (SES) framework to analyze the intersection of governance, power dynamics, and ecological outcomes within the Brazilian value chains in the Amazon. By combining GVC insights on governance and power asymmetries with SES principles of feedback loops and ecological interdependencies, the framework provides a holistic approach to understanding sustainability challenges in resource-intensive sectors. The GVC-SES framework bridges gaps in both literatures, embedding ecological feedback into GVC governance and addressing power dynamics in SES studies. This integrated approach offers actionable insights for advancing sustainability in the Amazonian value chains studied and beyond, demonstrating its applicability to other resource-intensive global value chains.

E - The political economy of growth models and economic policy II

10:30 - 12:00 Thursday, 10th July, 2025 520A Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Anna Hehenberger, Michael Kemmerling, Sonja Avlijas, Erik Neimanns The growth model perspective advances the comparative capitalist literature by placing the demand-side of the economy at the centre of analysis. Central ambitions of the growth model perspective include the study of how national capitalist diversity relates to the broader context of international political economy, and how politics contribute to the stability or instability of growth models. We propose two distinct sessions to advance this research agenda. One focuses on the varieties of the composition of economic growth, while the other zooms in on actors, social coalitions, and the contested politics of growth models. The four contributions to this second session offer critical insights into the contested politics of growth models and economic policy regimes. In different ways, they all address the question of how economic pathways and policy frameworks are shaped, reproduced, and challenged. By engaging with diverse aspects of agency and hegemony, the papers together will make a significant contribution to improving our understanding of the dynamics of growth regime sedimentation and change. Valentina Ausserladscheider examines political conflicts over ski infrastructure expansions in the Austrian Alps and identifies signs that the dominant tourism-led growth model is encountering a protective Polanyian countermovement which aims to re-embed skiing as an activity into local social relations. She draws attention to guestions about regional economic systems, local agency, and the reproduction of economic paths in the context of climate change vulnerabilities. Inga Rademacher investigates the historical emergence of financial stability regimes, contrasting the US Federal Reserve and the Bank of Japan. She argues that the divergent stability policies reflect distinct compromises between labour and capital in the 1970s. In addition to illuminating the comparative study of financial stability approaches, she thereby highlights the crucial role of social contracts in the formation of economic regimes. Sidney Rothstein's contribution sheds light on hegemonic structures in digital capitalism by revealing a counterintuitive way in which Big Tech consolidates its power. Tracing the development of the European Innovation Council and Scale-Up Europe, he shows how Big Tech has supported and impacted policies which had been intended to prop up alleged challengers. Finally, Lucio Baccaro and Mischa Stratenwerth delve into the notion of hegemony in growth model politics, with a particular focus on the incorporation or repression of economic losers. Drawing on Gramscian thought, their paper details the concept of dominant growth coalitions and explores mechanisms of support, consent, and compliance with the help of case studies from German producer group politics.

E - Industrial Relations, Political Parties, and Political Systems (I): Trade unions, state and party relationships

10:30 - 12:00 Thursday, 10th July, 2025 520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Chiara Benassi

This panel forms part of a session of three connected panels that tackle from diverse angles the interconnections between industrial relations, political parties and political systems. The papers in this panel deal with this theme from a meso-level perspective, analysing the changing strategic, political and organizational relationships between industrial relations actors (trade unions and employer organisations) on the one hand, and political parties and the broader political system on the other, in the context of diverse historical shifts in party systems, partisan ideology and in the role of the state in IR. The papers investigate the causes of these shifts and the impacts of these changing relationships on IR actors and IR systems, parties' ideology and policy positions, or both. The paper by Martinez Lucio and Lopez Andreu tackles this topic through a long-term historical perspective, charting developments in the changing relationship between unions and the political sphere in Spain since the 1960s through to the present period. In particular, it focuses on how different union confederations have conceptualized and enacted their relationship with political parties and their role in the political system over time; and seeks to explain how and why the "sphere of politics" as a terrain of union action has gained or lost centrality for Spanish unions through different phases of partisan shifts and political system realignment, among which the rise of third way politics. The paper by Kiefel focuses on the changing organisational relationship between trade unions and left-of-centre parties in liberal market economies (US and the UK) as a key explanatory mechanism that accounts for left parties continued adherence to supply-side Keynesianism and lack of deep ideological change
despite electoral decline and the aftershocks of the Great Recession. Through in-depth process tracing, the paper argues that the decline in the relative influence of trade unions inside left parties has favoured a "professionalization" of the policymaking process within parties which has become more technocratic and resistant to substantive ideological change. Finally, two papers focus on the recent rise of right-wing populism and the interactions between these parties and IR actors. The paper by Bondy explores the causes of the unexpected collaborations between unions and rightwing populist parties, asking what mechanisms facilitate these collaborations and what impacts do these collaborations have on trade unions and industrial relations at large. The paper compares Israel and Poland as cases of strong, prevailing collaborations between trade unions and rightwing populist parties that have followed similar trajectories of economic growth and democratic backsliding. The paper by Ibsen and Mailand examines how Danish trade unions and business associations have navigated the challenges posed by the rise of the right-wing populist Danish People's Party (Dansk Folkeparti, DPP) from 2001 to 2022. Utilizing a coalitional framework, the study investigates the interactions between social partners and the DPP in Denmark's small, open economy. The study investigates how social partners adapt their stance towards radical right-wing parties whose policies challenge key fundamentals of the country's growth strategy, highlighting how trade unions and business associations have diverging priorities in their interactions with the DPP, driven by differing stakes in the politics of labor supply (migration and early retirement) which makes the interaction with populist parties particularly complicated.

10:30 - 12:00 Thursday, 10th July, 2025 521A Track *I: Alternatives to Capitalism Session type On-site (Palais des Congrès) Susan Spronk

This panel brings together cutting-edge, original research in public banking. The world is currently undergoing a period of escalating crises that are associated with climate chaos and deepening socio-economic inequality. To confront these crises and achieve progress toward a more sustainable, equitable, and egalitarian global development model, it will be necessary to mobilize a significant amount of financing to convert and transform existing built infrastructure and manufacturing facilities, as well as to establish new ecologically responsible productive capacities. Market fundamentalist strategies, including price adjustments, tax incentives, and subsidies, have been the primary response of the financialized global market thus far. These methods have failed to achieve the necessary tempo, scale, or conditions for the essential reconfiguration of capital circuits, a failure that has been extensively documented by socialist and ecological scholars and activists, and that has been further emphasized by the United Nations. Nevertheless, it is equally important to consider the alternatives that progressive movements have struggled to put forward, even within reform agendas, despite the insightfulness of these critiques. Building on the work of Thomas Marois, the contributors to this panel engage with the idea that there is no pathway to a green and just transition that does not pass through the world's public banks. The contributors underscore the fact that even though public banks operate within the parameters of global financial capitalism, they are not immutable entities but rather are subject to social contestation. The investigations brought together in this panel explore the different ways that public banks can be (re)purposed to achieve public objectives in order to democratize public finance, when pushed by community, collective, and social movement forces to pursue goals of ecological sustainability and social equity.

P - Constitutional AI and Accountability (Hybrid)

10:30 - 12:00 Thursday, 10th July, 2025 Hybrid - PK-R250 (Pavillon President Kennedy, UQAM) Track *P: Accounting, Economics, and Law Session type Hybrid (UQAM) Clemence Garcia

This panel comprises four papers investigating the digitalization of tax administration and audit. Each research deals with a particular area of regulation: financial reporting, taxation, anti-money laundering rules, and auditing.First, the research by Magnus Kristoffersson addresses the ethical and regulatory challenges of using artificial intelligence (AI) to detect corporate fraud. His analysis is based on the premise that AI applications should comply with constitutional principles, i.e. "constitutional AI". The second research by Yuri Matsubara delves into the challenges of using AI for combatting tax fraud in the Japanese context. Her research addresses the reforms passed by the legislators since 2022 and their outcome, as well as the limitations due to strict restrictions regarding the use of taxpayers' data. The third paper by Eleonor Kristoffersson examines the legal and regulatory interplay between anti-money laundering obligations, advanced AI tools, and the European Union AI Act. Her analysis identifies specific compliance gaps and potential solutions to enhance legal certainty and accountability. The last paper by Clemence Garcia and Hiroko Inokuma addresses the assurance of digital platforms. They review the risks and challenges of auditing blockchain-based systems, namely their decentralization and cryptographic protection. The research concludes with some specific areas of consideration for further research.

Susan Spronk

This panel brings together cutting-edge, original research in public banking. The world is currently undergoing a period of escalating crises that are associated with climate chaos and deepening socio-economic inequality. To confront these crises and achieve progress toward a more sustainable, equitable, and egalitarian global development model, it will be necessary to mobilize a significant amount of financing to convert and transform existing built infrastructure and manufacturing facilities, as well as to establish new ecologically responsible productive capacities. Market fundamentalist strategies, including price adjustments, tax incentives, and subsidies, have been the primary response of the financialized global market thus far. These methods have failed to achieve the necessary tempo, scale, or conditions for the essential reconfiguration of capital circuits, a failure that has been extensively documented by socialist and ecological scholars and activists, and that has been further emphasized by the United Nations. Nevertheless, it is equally important to consider the alternatives that progressive movements have struggled to put forward, even within reform agendas, despite the insightfulness of these critiques. Building on the work of Thomas Marois, the contributors to this panel engage with the idea that there is no pathway to a green and just transition that does not pass through the world's public banks. The contributors underscore the fact that even though public banks operate within the parameters of global financial capitalism, they are not immutable entities but rather are subject to social contestation. The investigations brought together in this panel explore the different ways that public banks can be (re)purposed to achieve public objectives in order to democratize public finance, when pushed by community, collective, and social movement forces to pursue goals of ecological sustainability and social equity.

Featured Panel: The social organization of ideas: Translating research into labor policy in North America and Europe

Description

Note: This session is open to the public.

This panel is organized by Social Sciences for the Real World (SS4RW).

Over the past two decades, we have seen rapid change in the dominant ideas that guide policy decisions – as well as conflict over which ideas should govern future policies. In both North America and Europe, there have been often dramatic pivots between weakening and strengthening social policy and labor rights; encouraging or rolling back environmental protections and climate commitments; and extending free trade or increasing tariffs and trade protections. How do we explain both variation and change in policy decisions? What role do universities, think tanks, and union- or employer-organized research institutes play in shaping these decisions? And how is that role itself changing–with what potential longer-term impacts?

In this panel, a distinguished group of public scholars who have bridged the worlds of research, policy, and practice will discuss the different ways that research is translated into labor and social policy in Québec/Canada, the US, Germany, and the European Union – as well as contemporary changes in the 'social organization of ideas' and their implications.

Pierre-Antoine Harvey (Québec, Canada) draws on his experience as Research and Negotiation Advisor at the Quebec Labour Congress (*Centrale des syndicats du Québec* – CSQ), as associate researcher at the *Institut de recherche et d'information socioéconomique* (IRIS), and as professor at the Université de Montréal's School of Industrial Relations.

Thea Lee (USA) draws on her experience as Deputy Undersecretary for International Affairs in the US Department of Labor, heading the Bureau of International Labor Affairs; as president of the Economic Policy Institute; and as chief international economist, policy director, and deputy chief of staff at the AFL-CIO labor union confederation.

Thorsten Schulten (Germany) draws on his experience as Senior Researcher at the Institute for Economic and Social Research (WSI) at the labor union-affiliated Hans Böckler Foundation and as professor at the University of Tübingen.

Bart Vanhercke (European Union) draws on his experience as Director of Research at the European Trade Union Institute (ETUI), as Director and Senior Researcher at the European Social Observatory (OSE), and as advisor to the Belgian Minister for Social Affairs and Pensions and to the Secretary-General of the General Labour Federation of Belgium in the European Parliament.

The inspiration for this panel is Glenn Morgan and Marco Hauptmeier's (2021) argument that different trajectories of labor market deregulation in the United States and Germany can be explained by the distinct *social organization of ideas* in each country – grounded in national knowledge regimes (Campell and Pedersen, 2015). In Germany, the strong role of social partners and tight norms and hierarchies among universities and research institutions encourages more consensual and technocratic development of policy ideas. In contrast, the US relies more heavily on partisan think tanks supported by wealthy donors, and is based on fierce ideological competition – which they argue undermines evidence-based discussions, trust in expert advice, and development of research-based policy ideas.

The panelists will consider the ways in which different configurations of organizations and interests are shaping contemporary policy debates and decisions in their respective countries – as well as the possibilities for more progressive and pro-worker policies in the future.

"The ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influence, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back. I am sure that the power of vested interests is vastly exaggerated compared with the gradual encroachment of ideas."

-John Maynard Keynes, The General Theory of Employment, Interest and Money, ch. 24, p. 383 (1935)

Quebec/C - Social and family policies in Québec : an analysis of their impacts

15:10 - 16:40 Thursday, 10th July, 2025 518C Track **Quebec Stream Session type On-site (Palais des Congrès) Diane-Gabrielle Tremblay

Note: This session is open to the public.

This session situated in the Track on Québec and in Network C will concentrate on family policy and social policy in Québec and its impact on women, men and various socio-economic variables. Québec distinguishes itself from English Canada and the USA, as it is the only zone in North America to have such social and family policies, which appear favorable to work-life reconciliation and gender equality in employment and in wealth. This session will present elements of these policies, especially parental and paternity leave, as well as childcare, and will analyze the factors contributing to this social and family policy, as well as its impacts.

E - Industrial Relations, Political Parties, and Political Systems (II): Coalitional politics and changing trajectories of labour and industrial relations reforms

15:10 - 16:40 Thursday, 10th July, 2025

520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Ryan Lamare

This panel forms part of a session of three connected panels that tackle from diverse angles the interconnections between industrial relations, political parties and political systems. The papers in this panel tackle this theme from a macro-level perspective, looking at how different configurations and dynamics of coalitional politics between political parties, political executives at the local or national level and unions shape trajectories of labour policy and industrial relations reform and regulatory change at different scales (local or national). The papers in this panel tackle this theme from diverse theoretical angles and across a wide range of geographical and institutional context, spanning across Europe, East Asia, South Asia and Latin America. The paper by Zorzoli analyses the thrust and scope of the recent new wave of labour reforms implemented in Latin America in recent years, interrogating how they are connected to differing an partly conflicting conceptions of and agendas for the state's role in labour relations and the functioning of labour marketsThe paper by Sola and Cardenas seeks to explain the puzzling rise and even more puzzling demise of "third way" neoliberal labour politics orientation in the Spanish centre-left party PSOE from the 1990s to the present day, through a theoretical framework that adapts power resource theory by incorporating the role of ideational factors and institutional path-dependent legacies. The paper by Cigna et al investigates why and under what conditions dualization in labour market policy is undone either through recalibrating reforms that expand protections for outsiders, or through fully fledged liberalization; focusing on the cases of labour reforms in Italy, Germany and France since the 1990s. The paper argues that countries' trajectories beyond dualisation are partly shaped by the interplay between social partners and political parties and by shift in the coalitional politics between these actors. The paper by Sankar and Balasubramanian examines how partisan politics and government partisan composition have shaped labor reforms in India post-1991, highlighting the paradox of coalition governments advancing neoliberal policies while stable majority governments did not. It explores the fragmentation of unions and political parties, their differing adaptability to reforms, and the role of legislative composition in shaping labour policy outcomes. The paper by Johnson et al examines the role of city mayors in advancing decent work agendas through local regulatory experimentation, focusing on Greater Manchester (UK) and Seoul (South Korea). Despite limited formal powers, mayors Andy Burnham and Park Wonsoon championed progressive labor policies, achieving varying levels of success. The paper highlight the potential of local initiatives to improve labor standards while emphasizing their vulnerability to shifting national priorities and political dynamics, thus contributing to shedding light on the articulation between the local and national level of politics and policy-making in shaping labour politics.

Featured speaker: Joseph Wong (University of Toronto) - Theorizing Welfare, Development and Democracy

Description

Theorizing Welfare, Development and Democracy

Arguably one of the greatest political economic innovations of the 20th century was the emergence of the welfare state. Whether one evaluated its impact from the point of view of international relations (embedded liberalism), democratic deepening or economic development, the welfare state provided an important antidote to populism and autocracy. But in the current post-industrial political economy, is the welfare state still fit-for-purpose? In this talk, Professor Wong will draw from his past work on democracy, development and social welfare, as well as from his current research on 'reaching the hardest to reach,' to highlight challenges to the idea of the welfare state and our extant theories of the welfare state, and how we might go about re-theorizing inclusive development.

E - The Comparative Political Economy of Contemporary Inflation Management

17:00 - 18:30 Thursday, 10th July, 2025 520B

Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Alex Afonso

This panel brings together contributions that deal from different perspectives with the politics and political economy of inflation management in the context of the recent inflation crisis of 2021-2024. The papers are primarily based on research conducted in the framework of the MAINSOC project ("Managing the Inflation Crisis through Social Dialogue"), financed by the European Commission and running over 2023-2025. The contributions aims to investigate, from different angles and with different empirical foci, how industrial relations institutions and actors have contributed (or not) to the management of the inflation and cost-of-living crisis of 2021-2023, and with what effects; to understand the new or enhanced role of the state in the contemporary politics of inflation management and wage-setting; and to interrogate how we can account for the observed variety in the politics of wage-setting and inflation management across different European countries in a comparative perspective.

E - Global Political Tax Dynamics: Power, Governance, and Corporate Strategies

17:00 - 18:30 Thursday, 10th July, 2025 520C Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès)

This panel explores the political, economic, and legal dimensions of multinational profit-shifting, offshore financial centers (OFCs), structural power, wealth chains, global tax governance, and corporate tax avoidance. The political and legal challenges in combating tax avoidance are underscored by actions within international frameworks, which demonstrate the potential of legal mechanisms to challenge entrenched capital-protecting biases. However, these actions also emphasize the need for democratically legitimate and sustainable legislative solutions to balance deeper integration with national sovereignty. Also highlighted is how sophisticated tax planning structures and strategic alliances between states and professional services create environments that facilitate aggressive tax avoidance. These environments subtly shift the balance of structural power between transnational corporations (TNCs) and OFC states, enhancing state power and mitigating the race-to-the-bottom in tax competition. Economically, the closure of significant tax loopholes reveals ongoing challenges in global tax governance, as multinationals continue to hold substantial profits abroad despite efforts to repatriate them. This suggests that current literature may underestimate the extent of the tax base shifted abroad. Together, these themes emphasize the critical need for robust global tax governance and coordinated international efforts to create equitable and sustainable tax systems. Addressing the complex interplay of political, economic, and legal factors in multinational profit-shifting and corporate tax avoidance is essential for achieving fair and effective global tax policies.

G - Hiring and Inequality

17:00 - 18:30 Thursday, 10th July, 2025 520D Track *G: Labor Markets, Education, and Human Resources Session type On-site (Palais des Congrès) Joe Broschak

Gender and racial inequalities in earnings persist across North America. Research indicates that the mechanisms through which individuals are matched to employers have become an increasingly significant source of these disparities. The hiring process–encompassing employers' decisions regarding candidate selection–lies at the core of this job-matching dynamic. To illuminate the ways in which hiring practices contribute to inequality, the researchers in this panel aim to examine mechanisms at the hiring interface that may perpetuate inequality,

including the role of social capital, job referrals, and information about candidates or the hiring process. Collectively, these papers deepen our understanding of the relationship between hiring practices and inequality, while offering valuable insights into potential science-based interventions that could foster greater inclusivity in the workplace.

Featured Panel: AI Value Chains - from Exploitation to Organizing

Description

Artificial intelligence (AI) is being integrated in software used by individuals, companies, and governments worldwide. The production and use of AI connects workers in 'AI value chains', from software engineers designing AI systems, to data labelers and testers, to employees engaging with these tools in their workplaces. This panel examines different aspects of AI labor in the Global South and Global North, with the goal of better understanding both the factors that shape working conditions and the possibilities for building worker power and transnational solidarity across these value chains.

Uma Rani argues for a more sustainable and equitable AI ecosystem that acknowledges two interrelated types of labor: algorithmic labor and data labor. Findings from surveys conducted with data workers in Kenya and India show that the working conditions of data laborers are often undervalued and hidden from the sight of the end user.

Mark Graham describes AI as an 'extraction machine' that absorbs vital inputs–capital, power, natural resources, human labor, data, and collective intelligence–and transforms them into statistical predictions, which AI companies convert into profits. He introduces the Fairwork project, an action research methodology designed to hold companies within the AI production network accountable and to improve their pay and working conditions.

Martin Krzywdzinski turns attention to negotiation and consultation over how AI tools are implemented in the workplace, based on research in German companies. He discusses works council strategies toward and influence on the introduction of AI applications; as well as how worker representatives perceive the impact of AI on different work processes (e.g. in blue-collar and white-collar areas).

The panel will conclude with a discussion and debate on the most promising organizing and policy approaches to shift the unequal balance of power and improve conditions 'across the AI value chain'.

B - Community building and industrial upgrading in the semi-periphery

08:30 - 10:00 Friday, 11th July, 2025 519A Track *B: Globalization and Socio-Economic Development Session type On-site (Palais des Congrès) Erez Maggor

This panel responds to the conference theme, "Inclusive Solidarities: Reimagining Boundaries in Divided Times," by exploring the process by which firms build political coalitions to shape industrial policy in semi-peripheral economies. While it is now widely recognized that collective action can support industrial upgrading by facilitating investment in public goods, the process by which fragmented, low-trust communities build cooperation is less well understood. Kira Gartzou-Katsouyanni will begin the panel by highlighting the importance of boundaryspanning leaders in challenging historical, clientelistic financial practices and constructing a cross-sectoral coalition among banks, agricultural firms, and food processors to support export-oriented production. Darius Ornston, tracing coalition building within the Canadian tech sector, argues that the organizational tactics of coalition builders need to evolve over time. Collective identities which facilitate local collaboration may not support, and may even militate against, national cooperation. In Canada, the Council of Canadian Innovators unified a regionally and sectorally fragmented tech industry by using foreign multinationals as a foil. This strategy secured national innovation policy reforms, but it also narrowed policy discourse in problematic ways. Sid Rothstein paints a different picture, and a possible topic of debate, in Brazil and Spain. Here, large, US-based technology firms have played a more central role in associational governance and policy reform. Whereas Ornston concludes by describing the risks of an autarkic, mercantilist strategy, Rothstein's account illuminates the dangers of relying on foreign capital to foster digital growth. Brian Palmer-Rubin and Steven Samford complete the analysis by providing a more nuanced account of when foreign multinational do, and do not, participate in associational governance. Bridging the tech sector (electronics manufacturing) and agrifood (berry production), they illustrate how foreign firms are more likely to join local coalitions when capital is less mobile. We believe that bringing these diverse perspectives into dialogue will deepen our understanding of the circumstances under which firms join together to drive industrial upgrading as well as the role of foreign multinationals in this process. Moderator and discussant Erez Maggor, who has published extensively on innovation policy, state-industry relations, and the role of large foreign firms, is well positioned to both identify common ground and areas of disagreement that might benefit from further research.

E - Who cares for care workers? Challenges, dilemmas, and responses for employment and working conditions in the care sectors

08:30 - 10:00 Friday, 11th July, 2025 520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Karen Jaehrling Over the last decades in Europe, both the demand and the supply side of care services - including healthcare, early childhood education services, and long-term care services for the elderly - have been impacted by relevant changes, including social and demographic long-term trends, financial pressures exacerbated by the Covid-19 emergency, and technological transformations connected to the spread of platforms and algorithmic management to coordinate the service provision. As a result, the structure of care service provision has significantly changed, triggering or strengthening trends toward privatization and marketization, but also growing informality in service supply, although with relevant differences across European member states. These dynamics have triggered a strong pressure on labour in these services, as they are inherently labour-intensive, with labour costs representing the most relevant budget item. Labour issues are particularly relevant in light of the growing public budget constraints and the prominent role that market intermediaries are gaining in the care sectors. Relatedly, job quality is an important issue for two reasons: workers need to be attracted and retained in this sector, where labour and skill shortages are nowadays severe; given the typically labour-intensive nature of care work, not adequate / not satisfactory working conditions might translate into bad quality service provision. Therefore, employment and working conditions have been put under considerable strain, in order to make service provision sustainable in times of retrenchment and critical labour shortage across all advanced economies. New challenges for labour and industrial relations also emerge from the spread of platform-mediated care work, calling for urgent responses and reflections. The purpose of the panel is to discuss from different angles the challenges, dilemmas, and tradeoffs regarding employment and working conditions in the care sectors and the solutions adopted by industrial relations actors (not only the trade unions but also employers' associations and the state authority) to take adequate care of care work across different countries.

E - Navigating Property as an Asset Class: The Political Economy of Financialization of Housing and Land

08:30 - 10:00 Friday, 11th July, 2025 520A Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Hanna Doose, Erik Neimanns

Property investment in housing and land forms a key asset class in financialized capitalism, driving wealth accumulation and urban transformation. The panel examines the roles of institutional actors-such as sovereign wealth funds, private equity, and multinational corporations-alongside states and local governments. How do these actors navigate and influence property markets, and what logics drive their strategies? The paper by Hanna Doose examines the preferences of different types of economic actors in the context of a reform of the regulation of inward foreign direct investment in Aotearoa New Zealand. She shows that, besides class location, asset logics and their distributive implications play a crucial role in determining preferences towards foreign ownership of land. Oddný Helgadóttir and Saila Stausholm explore the links between ownership concentration in housing and preferences regarding specific types of housing. Invoking the concept of "asset aesthetics" they argue that a strengthened asset logic in housing has contributed to new housing construction tilted toward the preferences of a presumed median consumer. The paper by Cathal Coffey examines the role of the structural power of finance and how it may have contributed to a rise of institutional investors in private rental markets. Studying two highly different cases from Ireland and Denmark, he examines how, in addition to business power, state agency may have contributed to increasing housing financialization. Finally, Dustin Voss and Erik Neimanns study how the interplay of institutional, fiscal and economic conditions have led to different varieties of housing financialization across rich Western democracies. These varieties in the relative strength of private homeownership, institutional homeownership, and social housing each present distinct forms of path dependencies and sources for political and economic instabilities. In sum, the four papers in this panel shed light on the political, economic and ideational determinants of the financialization of housing and land, and they advance our understanding of the consequences of such developments in terms of business power, social inequality, and political and economic repercussions.

G - Recent developments on occupational choices and skill investments

08:30 - 10:00 Friday, 11th July, 2025 520C Track *G: Labor Markets, Education, and Human Resources Session type On-site (Palais des Congrès) Christian Rupietta

This session summarises papers on skill investments and occupational choices from the employee and employer perspective. The papers offer novel perspectives on individual decisions for further training, by providing detailed empirical evidence on the difference between anticipated and actual costs and benefits of training and investigate individual choices for green occupations. While from the employer perspective the papers in this session analyse how technological portfolios within a firm drives hiring decisions of applicants with different skill sets and adopt more macro-level perspectives by analysing the environment for training provision over time. The first paper analyses perceived costs and benefits in further training from an employee perspective. The paper starts with the finding that particular groups of employees such as lower educated, part-timers, and those who are exposed to automation tend to invest less in further training due to an underestimation of benefits or an overestimation of costs. The results show that employees who do not participate in training expect high costs for their time investment and personal effort. The study contributes to the literature by distinguishing the expected training costs and benefits between participants and non-participants and providing causal evidence for their differences. The second paper focusses on the formation of individual preferences for occupational choices and investigates the effect of the occurrence of natural disasters on the selection of green occupations. The study uses Australian data on the exposure to natural disasters due to the frequency and regional variation of their occurrence, creating a quasi experimental setting for the creation of environmental awareness. The results show that disaster exposure increases environmental awareness and positively influences the choice of green occupations. The authors use the information on the use of technology at the team level and form clusters to identify differences in hiring decisions for workers with different skill profiles. The third paper focusses on firm hiring decisions for workers with different types of training given the technological portfolio of teams in the hiring company. The literature shows that training is a key measure for firms to adapt to technological change and skill depreciation, however, does not distinguish how available technology profiles determine the decision to hire workers who completed different continuing vocational training courses. The empirical analysis of the data exploits a discrete choice experiment that exposes recruiters to applicants with different training profiles and allows the identification of recruiters adjustment of training demand given their teams technological profile. The fourth paper focusses on employers provision of training in the aftermath of the great recession (2008/09) and

starts from the finding that the commitment to vocational training has declined. In the theoretical background, the authors identify several reasons for the decline in training provision, ranging from sector-specific patterns to demographic changes. The results show that the least active group of firms further reduced its training provision, while the most active group increased its training provision. The authors identify regional differences and also show the importance of several factors such as wage levels and work flows.

10:30 - 12:00 Friday, 11th July, 2025 520C Track *H: Markets, Firms and Institutions Session type On-site (Palais des Congrès) Fabio Bulfone

Industrial policy has re-emerged as a critical tool for governments worldwide, driven by the pressing challenges of green transitions, digitalization, and the demands of an increasingly competitive geostrategic environment. This panel aims to bring together scholars from diverse disciplines and research traditions to explore the political economy dynamics underpinning this resurgence of state intervention. By focusing on the national, transnational and multi-level dimensions of contemporary industrial policy, the panel seeks to foster a deeper understanding of how global, regional, and domestic forces interact to shape the design, implementation, and outcomes of industrial strategies

J - Digital inequalities and infrastructures

10:30 - 12:00 Friday, 11th July, 2025 525B Track *J: Digital Economy Session type On-site (Palais des Congrès) Malcolm Campbell-Verduyn

From finance to social media, digital technologies continue to reshape socio-economic relationships globally. Individuals across the world can now connect and exchange information with each other more easily than ever. Behind images of an immaterial cloud, the development of new infrastructures spanning the globe was essential to enable these advances. These infrastructures include a wide variety of technical artefacts, ranging from data centers to smart appliances and even human implants, all connected by software and human practices. More than a purely technical process, previous research emphasized how infrastructures became new sites where different actors vie for power and influence. Not all actors are yet equal in this process. Historically powerful actors can leverage their vast pool of ideational and material resources to recreate existing inequities in a digital world. This panel explores how the deployment of digital infrastructures reproduces existing social inequities and creates new ones in a global context. Daniel Mügge and Kornelia Kitazou analyze the adoption of transhumanism and related strands of thought by technology leaders and how it practically shapes the development of our digital future. Marie Langevin and Gauthier Mouton look at how digital financial infrastructures are used by established financial actors to extract more value from marginalized groups in developing countries, supporting a form of neocolonialism. Tony Porter considers how instead of being a globalizing force digital infrastructures allow for more localized control and reinforce local elites in Africa. Guillaume Beaumier and Swati Srivastava explain how big tech companies attempt to legitimize their efforts by creating their parallel court-like system to adjudicate content moderation online.

Erin A. Cech - Featured Speaker (University of Michigan): "Who's Afraid of DEI? How the Moral Commandments of Work Anchor Opposition to Workplace Equity Efforts"

Description

Opposition to workplace equity efforts–often called "diversity, equity, and inclusion" (DEI)–has reached a fever pitch. It threatens to roll back decades of work tackling labor force inequalities and block future efforts to combat discrimination against women, people of color, LGBTQ persons, and other historically disadvantaged groups. How do DEI critics conceptualize and articulate their opposition? It is bigger than their reactions to specific policies and programs. It goes beyond political polarization. This DEI culture war, I argue, is a battle over the morality of work itself. The moral code of work has several widely-shared "moral commandments" (e.g., "don't discriminate," "ignore identity," "be objective") that anchor opposition to equity efforts across the labor force. When people believe equity efforts violate these commandments, their opposition can be visceral and intense. In this talk, I introduce this moral commandments framework and examine one facet of it in depth: ideologies of epistemic purity, I argue, are moralized ideas about defending the integrity of professional expertise and practice from threat. Using intersectionally advantaged professionals in STEM as a test case, I examine how endorsement of ideologies of epistemic purity is connected to opposition to equity efforts. I discuss the implications of these findings, and the moral commandments framework more broadly, for workforce inequality and organizational change.

H - Small states in geopolitical markets: Industrial Policy Beyond the Superpowers (The Political Economy of Industrial Policy II)

13:15 - 14:45 Friday, 11th July, 2025 520F Track *H: Markets, Firms and Institutions Session type On-site (Palais des Congrès) Erez Maggor

As industrial policy experiences a global revival, much attention has been focused on the strategies of major powers. This panel shifts the spotlight to small states and their approaches to industrial policy in the context of intensifying geopolitical competition and market transformations. By convening scholars from diverse disciplines and methodological traditions, the panel explores how smaller economies navigate the challenges of green transitions, digitalization, and economic security, often under the shadow of larger geopolitical actors. The discussion aims to unpack the unique political economy dynamics of small states and their capacity to shape, adapt, or resist global industrial policy trends.

J - Digital finance: FinTech, identity and crypto experimentation in the context of global political change

13:15 - 14:45 Friday, 11th July, 2025 525B Track *J: Digital Economy Session type On-site (Palais des Congrès) Mareike Beck

As the call for papers (CfP) states, "[d]igital technologies are contributing to radical, growing, and unpredictable transformations of economic life." Nevertheless, the converse is also true. Technological innovation in the field of finance has not outdone the deeply inscribed power relations and resource (im)balances that shape global financial relations until today. Although, the process of digitalisation, occurring at an accelerated pace with an ever-increasing proportion of economic activity taking place online, brings a dynamic interplay of obstacles and catalysts for changes in financial relations into play. As questions of financial autonomy, monetary sovereignty and financial inclusion are at the narrative forefront of these changes, new actors, alliances, business models and modes of governance arise. Challenging the historical constitution of the financial system, those fractures also reflect ongoing geopolitical changes.

As might hence be expected, the strategies of public and private actors towards digital transformations vary considerably. The current situation allows us to observe a kind of experimentation in various related fields to these transformations. These include the role of the FinTech industry in digital banking and payment, information communication technology in the digitization of identity, crypto and financial infrastructures, including Central Bank Digital Currencies but also decentralized forms of digital finance. The panel proposes to examine the rationales and interests that underpin the diverse strategies for promoting or adapting to digital financial changes within the global financial system, driven by digital technologies. To do this, the panel brings together academics with expertise in different areas of digital finance, with different regional focuses, and at different career stages. Although digital technologies play a significant role in these changes, the panel discusses these changes in a non-deterministic manner. This approach views the emergence, design, and implementation of digital technologies as expressions of social and political dynamics themselves. Consequently, the panel aims to transcend a mere description of changes due to digital technologies and situate them within a broader analysis of political and economic transformations on a global scale, highlighting the conflictual nature of digital technologies in finance.

N - Central Banking in the Periphery: Perspectives from Latin America

13:15 - 14:45 Friday, 11th July, 2025 522B Track *N: Finance and Society

Session type On-site (Palais des Congrès) Stephan Gruber

Since the 1980s, central banks have undergone institutional development that has made them powerful players in economic governance worldwide. The 2008 financial crisis and the Covid-19 pandemic only increased their influence, positioning them as central actors in contemporary capitalism. Scholarly interest in their roles and impacts grew accordingly and attracted attention from a wide range of disciplines, notably within the social sciences. Challenging mainstream economic analyses, these studies have scrutinized central banking from several angles, including its democratic legitimacy, distributive effects, and the power dynamics in which they are embedded. An interdisciplinary and critical field, aligned with the spirit of political economy, has emerged, shedding light on the interactions and mechanisms of power between central banks, financial markets, political authorities, and society at large. Despite these advances, much of the literature continues to focus on institutions in the Global North, overlooking the rich lessons from the histories of the Global South. In particular, the study of Latin American central banks remains underdeveloped and largely dominated by conventional economic perspectives. Against this backdrop, this panel seeks to advance a research agenda on the political economy of central banking in Latin America, bringing together both emerging and established researchers from different countries. Its aim is to provide a comparative analysis and pave the way for future research that explores the specificities of the region, while also examining its connections with other countries, integrating the Latin American experience into the broader developments of global capitalism.

Featured Panel: Polanyi after Globalism: Democracy and Threats to Democracy in New Counter-Movements

15:00 - 16:30 Friday, 11th July, 2025 517C Track **Featured Events Session type On-site (Palais des Congrès)

Featured Panel: Polanyi after Globalism: Democracy and Threats to Democracy in New Counter-Movements

Description

Karl Polanyi's theories have been influential in generations of SASE scholarship. In this panel, scholars from different world regions apply a Polanyian lens to analyze contemporary crises of globalization, the role of counter-

movements in market embedding and disembedding, and the implications for the future of democracy in (reconfigured) global capitalism.

Dorothee Bohle considers the collapse of neoliberal globalization and the rise of right-wing populism in Eastern Europe, with a focus on Hungary. Zachariah Mampilly examines the rise of African counter-movements, which regularly challenge the waning neoliberal economic order. Andreas Novy discusses the role of social democratic regulation, planning and public infrastructures in countering reactionary far-right movements and ecological overshoot.

The panel will be moderated by Marguerite Mendel, co-founder of the Karl Polanyi Institute of Political Economy at Concordia University.

Summary of individual contributions:

Dorothee Bohle: Polanyi's The Great Transformation famously opens, "Nineteenth-century civilization has collapsed. This book is concerned with the political and economic origins of this event, as well as the great transformation it ushered in" (TGT: 3). In a similar vein, today's tumultuous times bear witness to the collapse of 20th-century civilization—that of neoliberal globalization secured by the *Pax Americana*. What similarities does this civilization have with its 19th-century precursor, and what are the differences? Does the rise of right-wing populist forces present a similar deadly interregnum to that which Polanyi attributed to fascism, or is right-wing populism here to stay? What resources can contemporary movements for and against marketization draw on? Bohle will address these questions from the perspective of Eastern Europe, specifically Hungary. This region has seen the most radical implementation of neoliberal globalization and an early populist right backlash.

Zachariah Mampilly: African scholars such as Thandika Mkandawire have suggested that the neoliberal era in the Global South should be understood as a manifestation of a third great transformation in which the market is fully disembedded from society. But such efforts have not gone unchallenged. The third wave of African protest which began in 2005 and ripples into the present regularly challenges the lingering effects of the waning neoliberal economic order. From protests over the prices of bread and fuel to movements organized to challenge state efforts to displace populations in the name of national development or foreign investment, many of Africa's ongoing countermovements have placed economic issues at the center of their agitation. Yet, the relationship between economic forces and the social and political dynamics in African countermovements is often misunderstood, both by outside analysts as well as activists themselves who are regularly dismissed for lacking a clear political agenda. In this panel, Mampilly will explore the rise of African countermovements and their relationship to the broader shifts unfolding as a result of Africa's changing position within global capitalism.

Andreas Novy: In 'The Great Transformation', Polanyi proposes a politico-economic model for a mixed economy that overcomes what he calls the "liberal illusion" that society can function without power and coercion. He insists on the necessity of regulation and planning, i.e. on top-down democratic agency by public institutions, for guaranteeing freedom not only for the select few but for all. What was needed to counter fascist movements in the 20th century was a social form of democracy - i.e. a New Deal for public infrastructures and universal basic services to satisfy human needs - as a precondition to guarantee liberal democracy based on civic and political liberties. In this panel, Novy will consider the importance of a human needs focused form of democracy in defending 'freedom in a complex society'. In the current conjuncture, regulation, planning and public infrastructures that overcome the primacy of individual market choice are even more urgent to counter reactionary far-right movements. The current ecological overshoot that endangers trespassing ever more planetary boundaries demands collective self-limitation by means of democratic planning and regulation.

B - Geopolitics and Comparing National Industrial Policies in Semiconductors

15:00 - 16:30 Friday, 11th July, 2025 519A Track *B: Globalization and Socio-Economic Development Session type On-site (Palais des Congrès) Douglas B. Fuller

This panel combines national-level case studies of industrial policymaking with consideration of the wider geopolitics spurring industrial policy initiatives and also shaping their implementation. Lechowski examines industrial policymaking at the supra-national European Union level as well as in Germany since industrial policymaking in EU member states cannot be entirely separated from EU-level considerations. The findings are that Germany has thus far fallen far below the expectations set by policymakers and Lechowski attributes the limited success due to the EU's institutional-regulatory environment and changing sector-specific power relations. Raj-Reichert and Wuttke trace the evolution of semiconductor policymaking in Malaysia and have found increasingly activist industrial policymaking in recent years albeit in the context of complex relationships between the Malaysian state, multinational firms and domestic suppliers. Lee argues that Korea still employs industrial policy but it has changed its approaches to industrial policy in recent decades. In light of nearshoring, supply chain resiliency, digitization and AI-based manufacturing, He considers the role of industrial policy regarding semiconductors. Taking a wider angle to examine how global industry dynamics and the industrial policies of other nations influence one another, Fuller argue that TSMC's dominance in logic chipmaking affects how states view the two primary concerns currently driving industrial policy in this industry: supply chain resiliency and traditional developmentalist concerns to (re)build or maintain current advanced chipmaking capabilities. On the one hand, TSMC's market dominance points to opportunities for developmentalist industrial policy to build rivals to seize some of the monopoly rents TSMC enjoys. Under these circumstances, one would expect states to view TSMC as more of a competitor than a solution to their developmentalist projects. On the other hand, states pursuing defensive economic statecraft based on supply chain resilience would view TSMC investment as a solution. Fuller will pay most attention to the cases of Japan, Taiwan and the US in his presentation. Finally, Minnich examines the origins of American weaponization of the chip industry, the seminal event leading to heightened geopolitical security concerns around semiconductors, and traces it back to America's perceived silicon-based offensive advantage vis-à-vis China.Place holding.

15:00 - 16:30 Friday, 11th July, 2025 520F Track *H: Markets, Firms and Institutions Session type On-site (Palais des Congrès) Donato di Carlo

Industrial policy has resurged as a critical response to the dual challenges of green transitions and digitalization in an increasingly competitive geostrategic environment. This panel focuses on the financial underpinnings of this revival, exploring the mechanisms, actors, and political dynamics that shape the funding of new industrial strategies. By bringing together scholars from diverse disciplines and research traditions, the panel aims to

uncover who bears the financial burden of these policies, how resources are mobilized across public and private sectors, and what implications this has for economic governance and social equity.

I/MC12 - Rethinking Sites and Agents of Class Struggle in Contemporary Capitalism

15:00 - 16:30 Friday, 11th July, 2025 521A Track *I: Alternatives to Capitalism Session type On-site (Palais des Congrès) Lara Monticelli, Torsten Geelan The contributions of this panel build on the Law and Political Economy framework to analyze different sites of class struggle, ones that are both central to the production and (social) reproduction of political and economic order, and potentially crucial spaces for (internationalist) political resistance. In order to so the contributions examine the relationship between state, society and capitalist development, the power exercised by various institutions of the capitalist state, and the changing nature of class relations in neoliberalism. Various examples will be used from the US, Europe and elsewhere in the global north and south to explore the dynamic of the state-capitalism relationship in historical as well as contemporary conditions. More specifically, the panel will look at the transformation of work and class identity, social reproduction and commodification, labour and consumer rights, and the powers of the political state in global capitalism. It will do so both at an abstract theoretical level, and in the context of concrete legal, political and social struggles. This will reveal the interdependency of the sites and agencies of struggle against the forces of contemporary capitalism.

The panel bridges historical analysis with contemporary case studies to provide an interdisciplinary exploration of how financial institutions, state policies, and collective imaginaries shape economic realities and geopolitical dynamics over time. By combining diverse case studies and archival research, it highlights how trust-or its absence-profoundly influences governance, stability, and international relations. The first paper, "Untrustworthy authorities: the roots of monetary distrust in Argentina," examines the lasting social trauma caused by decades of inflation and currency crises in Argentina. It explores how the collective loss of trust in the national currency gave rise to deeply rooted distrust narratives and protective financial practices that perpetuate cycles of instability. The second paper, "Financing Foreign Policy: UK Banks' Involvement in Poland, Romania, and Hungary during the 1981-82 Sovereign Debt Crisis," shifts focus to the Cold War era. It investigates how UK banks became tools of geopolitical strategy in Central and Eastern Europe. Using archival research, it reveals how the British government leveraged financial institutions to promote East-West economic relations, providing fresh insights into the role of financial diplomacy in shaping the geopolitical landscape. The third paper, "Show Me the Money: Performing Stability in Central Bank Museums," explores how central banks use museums to bolster trust and legitimacy in their role as monetary guardians. By presenting museums as sites of public education and symbolic authority, the paper highlights how these institutions seek to construct and perform stability to counter public skepticism in an era of rising inequality and recurrent financial crises. The fourth paper, "Spatial Imaginaries and the Battle for Price Stability: Historical Perspectives on Inflation in the US and UK," examines how policymakers' assumptions about inflation-whether universalist (abstract forces) or particularist (social practices)-have shaped responses to price instability. Analyzing key historical moments, including the 1930s deflation, the "War on Inflation" in the 1970s and 1980s, and the post-COVID inflation, the paper reveals how competing narratives underpin strategies to rebuild trust in monetary systems. Together, these papers illuminate the critical role of trust in financial systems, exploring how it is built, maintained, and lost across different contexts. They illustrate that trust is not only a foundation of economic stability but also a contested space where social narratives, political agendas, and institutional performances intersect.

O - Conceptualizing GVCs in a changing global environment; policy implications

15:00 - 16:30 Friday, 11th July, 2025 517B Track *O: Global Value Chains Session type On-site (Palais des Congrès) Florence Palpacuer Socioeconomic changes, both internal and external to firms and industries, call for updated concepts of GVCs. Chief among these changes are the reassertion of the state and digital transformation, which in many senses work in opposite directions. States are intervening more aggressively to shape outcomes in key industries and reign in unfettered globalization to meet a variety of policy goals, from carbon reduction, to incentivizing ethical behaviour, to capturing high value GVC segments within (or near) national borders, to addressing cybersecurity concerns. At the same time, digital transformation is altering the content and geography of work, unleashing powerful platforms with global reach, and accelerating innovation on multiple fronts. As policy makers have only just begun to come to grips with the fact of GVCs, the organization of industries is only becoming more dynamic, complex, and with our existing conceptual tools, opaque. This raises serious questions about state capacity, not only to craft effective policies that avoid unintended consequences, but to even conceptualize how complex global industries function. This session enters the fraught intersection of industrial change and policy formulation with the baseline assumption that new tools and concepts are needed to understand where the limits of effective policy lie. The papers take various approaches to this problem, developing new conceptions of multinational enterprises, GVCs, and business ecosystems; and looking at specific policy instruments - nearshoring strategies and industrial and export control policies -- in the context of rapid industrial change and rising global geoeconomic tensions.

A - Community Development Financial Institutions and Non-Predatory Financial Inclusion

17:00 - 18:30 Friday, 11th July, 2025 518A

Track *A: Community, Democracy, and Organizations Session type On-site (Palais des Congrès) Frederik Wherry

Discrimination, exclusionary practices and sustained disinvestment in poor and minority communities on the part of banks and other financial institutions in the US have underwritten substantial push back, politics and policy reforms. Yet expanding communities' access to credit via mainstream banks, affiliated institutions and Fintechs has all too often fostered predatory financial inclusion. In this panel, we focus on community development financial institutions (CDFIs), a distinct but less fully appreciated community of credit and banking organizations formed and dedicated in their missions, core practices and forms to combatting financial exclusion and predatory inclusion. CDFIs include community banks, credit unions, non- and for-profit loan funds and venture funds, and receive critical support from the Community Reinvestment Act and the US Treasury's CDFI Fund and certification program. CDFIs forge pathways for non-predatory financial inclusion by combining established logics of banking with innovations in products and creditworthiness assessment; "developmental" strategies of working closely with borrowers and communities to promote financial literacy, improve credit standings and help business upgrade their operations; and other practices that transform risk. CDFIs often collaborate with community development organizations, each other, and other lenders in these efforts. Moreover, CDFIs demonstrated remarkable capabilities as "financial first responders" during the pandemic, stepping up within and substantially enhancing the federal government's abilities to reach neglected communities in its effort to sustain small business in an economic and public health crisis. Foregrounding this distinctive community, papers in this panel will present new analyses of CDFIs' basic business models, proliferation, impact and scalability, shedding new light on the prospects this organizational community create for genuine financial inclusion.

17:00 - 18:30 Friday, 11th July, 2025 520B Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès) Sebastian Diessner

The last few years have been particularly transformative for the EU's economic governance architecture. The polycrisis that affected the global economy put the EMU governance system under great strain. During these challenging years, the EU has accumulated an impressive and diverse set of new instruments to regulate the behaviour of its member states in the fiscal and macroeconomic area. Drawing lessons from past and current policy challenges to understand the transformation of the EU's multi-level fiscal governance system, this panel aims to discuss and explain how these new instruments are embedded in the existing institutional arrangements.

MC12/I - Planning in times of digitalization and climate crisis: On the return of economic planning in capitalism

17:00 - 18:30 Friday, 11th July, 2025 521B Track *I: Alternatives to Capitalism Session type On-site (Palais des Congrès) Alejandro Ruiz, Jan Groos

This panel explores the proposition that "planning is already endemic to capitalism." Scholars have increasingly highlighted how capitalist systems integrate planning mechanisms across various domains. For instance, research argues that intellectual monopolies extensively orchestrate global production and innovation networks, controlling the flow of knowledge and resources (e.g., Rikap, 2022; Bensussan, Durand, & Rikap, 2023). Similarly, analyses of digital capitalism suggest that traditional market mechanisms are being supplanted by digital feedback infrastructures that enable centralized coordination (e.g., Morozov, 2019; Durand, 2024).

Closely related, social scientists have examined market design as a planning mechanism behind digital platforms that mediate transactions for private and public goods (e.g., Rilinger, 2024a, 2024b). Furthermore, literature on new state capitalism underscores the resurgence of public planning, evidenced by the proliferation of industrial policies, state-owned enterprises, and sovereign wealth funds worldwide (e.g., Alami & Dixon, 2020, 2023). These trends are expected to expand further, especially as the demands of decarbonization and socio-ecological transformation necessitate what some term "green economic planning" (Ban & Hasselbalch, 2024).

Finally, recent work in the political economy of finance points to the increasing influence of central bank planning (e.g., Braun, 2018, 2022) and the emergence of macrofinancial regimes (e.g. Gabor & Braun, 2023) that shape public planning dynamics (Sorg, 2023). Together, these perspectives reveal a growing convergence of private and public planning practices within capitalist systems, reshaping the boundaries of markets and governance.

The contributions each study a particular case of planning in capitalism and engage with similar questions, such as central-local coordination, knowledge problems, decision-making, and the mediation of deliberation and parametric coordination. The central question is not just whether and to what extent these new forms of planning can solve classic problems of economic planning, but whether they can succeed on their own terms. To this end, the studies explore problems confronted by modern planners, strategies to solve them, and obstacles to success. The aim of the panel is therefore to contribute to an interdisciplinary and empirically grounded study of planning in action that can inform normative questions about the desirability, shape and scope of economic planning.

N - The role of financial systems to support climate trasition

17:00 - 18:30 Friday, 11th July, 2025 522B Track *N: Finance and Society Session type On-site (Palais des Congrès) Norberto Montani Martins

The climate crisis is no longer a distant threat; it has already caused immediate, unpredictable effects that vary across regions, sectors, and societies. Scientists have been concerned about climate change since at least the 1970s, but the need for international cooperation became clear at the 1992 Earth Summit in Rio de Janeiro. In 1997, the Kyoto Protocol set emission targets for developed nations to reduce greenhouse gas (GHG) emissions. However, it faced significant challenges and was not widely adopted. A more defined global temperature goal emerged in the 2015 Paris Agreement, where countries committed to limiting global warming to below 2°C above pre-industrial levels, with an ambition of 1.5°C. The agreement also aimed to align international financial flows with sustainable, climate-resilient development and low GHG emissions. Achieving these targets requires substantial public and private investment in infrastructure and research. The Paris Agreement highlights the central role of finance in achieving climate goals, particularly through Article 2.1(c), which stresses the importance of making financial flows consistent with low-emission pathways. According to Guttmann (2023, p. 27), this shift in finance practices will involve multiple tracks to address climate change, some of which will directly affect central banks.At COP26 in 2021, sustainable finance took center stage, with the establishment of the Glasgow Financial Alliance for Net Zero. This private initiative aims to contribute to net-zero emissions, recognizing the financial sector's key role in funding climate transition projects. While discussions on climate crisis financing began in 2016, it was at COP26 that the movement gained real momentum. Financial systems, including institutions, markets, and central banks, as creators and drivers of funds, are crucial for financing investments that support the structural changes needed for a sustainable transition. Central banks and regulators, traditionally focused on inflation and financial stability, have made significant progress in understanding climate risks and integrating them into regulatory frameworks. There is also a growing effort to incorporate green financial instruments into monetary policy. However, the current private financial system often reinforces the existing market model, which can exacerbate risks related to the sustainable transition. Therefore, development banks play a crucial role in financing the transformation process (Crocco & Feil, 2021). This panel will explore the role of the financial system in the green-sustainable transition, focusing on the perspectives of central and development banks.

O - FDI and Geopolitics

17:00 - 18:30 Friday, 11th July, 2025 525A Track *O: Global Value Chains Session type On-site (Palais des Congrès) Louise Curran Geopolitics affects international business in many ways, calling for more scholarly attention to its causes and multinational enterprise (MNE) responses, most notably their foreign direct investment decisions. Around the globe, MNEs in strategic industries are encountering a slate of new legislative, governmental and regulatory policies that aim to regulate FDI and global value chains for geopolitical gains, especially in high-technology sectors. For better or worse, many countries are abandoning their liberal commitments to an open and rules-based multilateral system to take more protective approaches to their trade and investment relationships based on national security concerns, leading to geopolitical tensions. To date, academic scholarship has had little to say about the geo-strategies that MNEs should adopt to cope with geopolitical tensions and what this means for FDI. The objectives of this panel are threefold. One, we intend to discuss how geopolitics affects FDI broadly, including its diverse repercussions for FDI that originates from different countries. Two, we aim to discuss why and how today's geopolitics may differ from geopolitical tensions in the past and and what it implies for FDI research. Three, we endeavor to address some critical strategic responses by MNEs gravely facing geopolitical tensions. By doing so, we attempt to shed new light on the relation between geopolitics and FDI. For this purpose, we have brought together a panel of five expert speakers and one discussant who will take on a kaleidoscopic approach to looking at the relation between geopolitics and FDI, each investigating it from a different angle.

H - Education in Times of Technological Change: Institutional trajectories,

Employers' Hiring and Training Strategies and Workers' Preferences

08:30 - 10:00 Saturday, 12th July, 2025 520E Track *H: Markets, Firms and Institutions Session type On-site (Palais des Congrès) Marius Busemeyer

This panel explores how labor markets and education systems adapt to technological changes. Automation increasingly replaces routine manual and cognitive tasks, and new sectors emerge with the arrival of AI and the further expansion of service sectors. Both developments challenge education systems to balance immediate employability with broader, and more general skill sets allowing to navigate evolving occupational landscapes. Educational pathways, particularly vocational education and training (VET), which has traditionally been geared toward roles in manufacturing, may need to be rethought. This panel examines how institutions, firms, and individuals respond to challenges and opportunities posed by digitalization, automation, and sectoral shifts. Taking a comparative perspective on the evolution of welfare institutions, a first contribution argues that advanced economies like Germany, Sweden, and the UK share policy trajectories in their transitions to knowledge-based economies. This comparative case study on Germany, Sweden and the UK emphasizes the expansion of education and training policies amidst broader liberalization and retrenchment trends. Two further contributions analyze the demand side of the labor market and investigate how firms adapt their hiring and training strategies in times of technological change. A first contribution examines the continued viability of VET from employers' perspective. Survey experiments analyzing hiring preferences in the childcare and accounting sectors, show that VET remains highly popular for employers. Expert interviews with employers further reveal that immediate employability, the rapid updating of skills, as well as the higher salaries of general education graduates contribute to the popularity of VET. A second contribution examining employers, addresses the challenges faced by training firms in collective skill formation systems. Using unique Swiss survey data, the paper reveals how firms, adapting to technological change, struggle with skill gaps at the higher and skill shortages at the lower end of the skill distribution. In occupations at the higher end of the skill distribution, talented apprentices join a general education rather than VET track. At the lower end of the skill distribution, firms have trouble recruiting sufficiently talented apprentices. A final contribution analyzes the supply side in the labor market and investigates the educational preferences of the general population across seven Western European countries. This cross-national survey highlights a consistent preference for workplace-based learning, especially in high-quality VET systems, and a growing interest in programs offering pathways to higher education and IT-related careers. The preference for pathways to higher education and interest in IT-related sectors corresponds closely to expectations regarding the adaptation on the labor market. The preferences of workplace-based training illustrates the importance of institutional differences. Together, these papers illuminate the interplay between technological change, institutional adaptation, and individual preferences, offering valuable insights into the future of skill formation systems and labor market resilience.

08:30 - 10:00 Saturday, 12th July, 2025 525A Track *S: Environment and Climate Change Session type On-site (Palais des Congrès) Jason Jackson

The post-neoliberal era we are putatively experiencing across the Global North (Vogel and Fligstein, 2020) and the Global South (Alami and Dixon, 2024) has foregrounded industrial policies as a crucial tool to develop and achieve the transition away from fossil fuels, while allowing for a renewed economic development in which states take a more prominent coordinating role. This panel seeks to critically examine the global contradictions embedded in these green industrial policies, as they are projected and implemented in countries with uneven state capacities, and for variegated economic sectors. This panel interrogates how the pursuit of "green growth" reconfigures existing international financial mechanisms, investment in technological innovation, and geoeconomic competition, while claiming to address planetary ecological limits. Central to the discussion is the reconfiguration of state-market relations under green industrial policy. Governments in the Global North, particularly in regions like the European Union and the United States, have embraced aggressive policy tools such as subsidies, tax incentives, and public investments to promote renewable energy, electric vehicles, and technological innovation. These policies not only aim to decarbonise their economies but also secure a competitive advantage in emerging green industries. Yet this strategy creates tensions as it prioritises national competitiveness over global cooperation, exacerbating economic inequalities and trade conflicts. For nations in the Global South, green industrial policies are often constrained by external dependencies on technology, finance, and trade structures dominated by advanced economies, leading to new vulnerabilities and forms of peripheralisation. Drawing on the research of an interdisciplinary group of scholars working across economic sectors and in both Global North (US, Germany, Japan) and Global South (Brazil, India), this panel seeks to

critically analyse how green industrial policies are redrawing or entrenching global power structures, interrogating whether alternative pathways, including South-South cooperation and regional green industrial strategies, can disrupt these asymmetries.

T & F - Ageing and innovation: a comparative perspective between Europe, Americas, and Japan

08:30 - 10:00 Saturday, 12th July, 2025 517C Track *T: Health Session type On-site (Palais des Congrès) Margarita Estévez-Abe, Kathryn Ibata-Arens, Sébastien Lechevalier

Advanced economies are facing a "slow crisis" with a double demographic shock: a contraction of their population and an increase of the share of over-65s. Japan is at the forefront of this change with the cumulative population contraction of 20% from its peak by the same date while the share of the elderly should reach 40%. Japan is at the center of academic controversies about the socio-economic implications of ageing. Although the Japanese case is characterized by several specificities, our contention is that it deserves a comparison with some countries in Europe and in the Americas. Among these controversies, the relationship between ageing and innovation is one of the least studied, if one puts aside research on the impact of age on productivity, whose results are far from being stabilized. The purpose of this panel is to explore this relationship in developing a comparative approach between Europe, the Americas, and Japan, in organizing a dialogue between different disciplines (sociology, economics, geography, anthropology). We address the question of this relation in two directions:-How does ageing affect innovation? The guestion here is not so much to consider physical and intellectual capabilities of individual but rather to discuss how the institutional characteristics of our socioeconomic systems can affect the innovation capabilities at the macro and micro levels through their interactions with demographic variables-Which model of innovation in an aged society and economy? Our hypothesis is that ageing is profoundly transforming our societies and economies and thus should lead to the development of an adapted innovation model and more generally innovative answers to the challenges associated to ageing.

Featured Panel: Practicing Sociology: Bringing Tacit Knowledge out of the Shadows

Description

Throughout their careers, social scientists must come up with compelling research topics, revise their manuscripts for publication, and decide when and where to publish. Despite the importance of these skills, they are left in the shadows - seldom if ever addressed in the course of graduate training. For this panel, leading sociologists including several Past Presidents of SASE reflect on their work and demystify this tacit knowledge.

B - Shaping Green Development in Emerging Countries

10:30 - 12:00 Saturday, 12th July, 2025 522B Track *B: Globalization and Socio-Economic Development Session type On-site (Palais des Congrès) Renato Lima-de-Oliveira

The energy transition from a carbon-intensive society calls for changes in development models.

Recently, the gradual failure of international organizations and arrangements to meet the global carbon reduction targets shifts the burden to national decarbonization commitments by 2050, as the Paris Agreement requires. These trends are particularly relevant for emerging economies, due to asymmetries of climate change impacts and national resources for mitigation.

This new reality requires substantial investments in green development. As techno-paradigms for new forms of energy and production are emergent, required changes do not fit into previous former 'upgrading framework' (Han and colleagues, 2021). These eco-friendly and eco-efficiency strategies, trapped in the 'business as usual' mode, cannot cope with the depth and scope of actions necessary to meet the multiple dimensions of climate change.

For emerging countries, the stop-and-go pace of the global energy transition due to expanding national political upheavals, growing geopolitical stress, and expanding market uncertainties presents a unique development window of opportunity. Emerging countries' (renewable) energy and environmental endowments, economic structure, comparative advantages, State strength and governance, political system, business-government relations, and developmental path and style, among others, influence their strategic green development responses. Each, in turn, is shaped by both domestic and international factors. The scale and scope of their relative impact varies from country to country.

Informed by the above, emerging countries have given various responses and adopted different national energy transition strategies. Competing international cooperation programs implemented through innovation diplomacy often strive to shape these strategies' general objectives and policy actions. State developmental ideas and policy styles seek to mold the agenda. Territorial and sector interests and development entrepreneurs push to configure the decision-making space. The State institutional environmental toolbox includes regulations, public investment in green infrastructure, green finance, international cooperation and knowledge transfer.

This panel addresses a variety of strategic responses to the energy transition at various political levels in a diverse group of countries: Brazil, Malaysia, and Mexico. Their range varies schematically from reformist' business as usual' (Mexico) to political stalemate-induced 'green' tide to raise all (Brazil) and green opportunities enabling aspirational development (Malaysia).

E - Pro-Outsider Recalibration or Residualisation? Labour Market and Welfare State Transformations in the EU

10:30 - 12:00 Saturday, 12th July, 2025 520C Track *E: Comparative Capitalisms Session type On-site (Palais des Congrès)

Dualisation has been a central theme cutting across the comparative political economy and comparative welfare state literatures. Drawing on these lenses, scholars helped identify rising discrepancies in the labour market and welfare state protection granted to variously-defined 'insiders' and 'outsiders', including precarious workers, women, migrants, youth, and other under-protected groups. In recent years, however, this approach has increasingly been challenged for failing to not only capture countervailing trends of pro-outsider recalibration, but also to qualify other phenomena at stake in labour market and welfare policymaking. These developments begets several questions:•Why did European countries affected by similar economic shocks and global, mega-trends

enact different reforms to address labour market risks?•Which reforms did European governments most commonly rely on to address labour market dualisation, and with which degrees of success?•What role did political groups and state elites play in driving forward their labour market reforms agenda? This panel brings together a combination of cross-sectional, quantitative, and longitudinal case-study analyses to examine recent trends in labour market and welfare state transformations across the EU. It begins by exploring labour market reforms from a large-N perspective, providing a broad overview of policy responses to dualisation. The focus then shifts to the political economy dynamics driving reforms in Mediterranean countries–Greece, Portugal, Italy, France, and Spain–where labour market segmentation and welfare recalibration are known to have been particularly pronounced. By bringing these studies into dialogue, the panel aims to highlight not only the successes and limitations of recent reforms in addressing labour market segmentation but also the evolving role of state elites, political parties, and economic pressures in shaping welfare systems' ability to foster inclusivity now and in the future.

G - Vocational education and innovation processes

10:30 - 12:00 Saturday, 12th July, 2025 522C Track *G: Labor Markets, Education, and Human Resources

Session type On-site (Palais des Congrès) Uschi Backes-Gellner

The session contains papers that investigate the effect of education and innovation with a particular focus on vocational education and training (VET). The effect of vocational education and training on innovation is highly dependent on the country context. The literature shows that in only a few countries such as Germany and Switzerland a positive effect of vocational education and training on innovation exists. These effects stem from the design of the VET system and from the design of innovation processes in companies. This session covers further theoretical and empirical analysis on the effect of vocational education and training on innovation and contributes to the literature by identifying novel mechanisms at the firm and country level. The first paper analyses the effect of educational diversity of inventor teams on team performance. The paper links the discussion of the contribution of different education levels and types to innovation outputs. While the literature highlights the positive effect of tertiary education in general it neglects the positive effect of secondary vocational education in particular countries. In combination with findings of positive educational diversity on team performance the authors hypothesize a positive effect of educational diversity including members with secondary vocational education on inventor team performance. The second paper investigates the effect of social gender norms on innovation. The start from the finding that women are underrepresented among inventors and in STEM fields. The empirical analysis disentangles the direct effect of social gender norms on innovation from the indirect effect through educational or occupational choices. The results show a reduction in women's patent quantity for regions with strong traditional social gender norms. Further analyses show an increase in women in STEM fields does not replace men's patents but lead to an overall increase in innovation activities. The third paper investigates the role of capital investment in firm's employment and training decisions. It focusses on the restructuring of the production process as an episode of capital infusion. Firms respond with such an investment spike to technological changes, trade changes and changes to government policy. The paper finds that SMEs and productivity laggards are most likely to experience an investment spike and that investment spikes positively affect the provision of firm-sponsored apprenticeship training. The fourth paper analyses the design of vocational education and training systems and their effect on innovation processes in companies. While the literature on the effect of education and innovation mainly identifies tertiary education as a contributor to innovation, the effects of secondary education required further analyses. Empirical studies that analyse the effect of vocational education and training on companies innovation outputs find positive effects only in a limited set of countries. While these studies link the contribution of vocational education to the Doing using and interacting (DUI) mode of innovation, its link to the Science, Technology and Innovation mode (STI) remains largely neglected. I analyse how innovation relevant knowledge is shared within a VET systems and establish a link between a VET system and DUI and STI focussed innovation processes in companies.

MC12/I - Towards a practical application of democratic economic planning: the question of operationalization and data

10:30 - 12:00 Saturday, 12th July, 2025
521B
Track *I: Alternatives to Capitalism
Session type On-site (Palais des Congrès)
Sophie Elias-Pinsonnault

Many recent publications show an interest in democratic economic planning (DEP) as an alternative to capitalism. DEP is not a unified proposal based on only one universal model. On the contrary, it is subject to a widespread and mostly qualitative debate, and many options and models circulate and are discussed. Nevertheless, one element all DEP models have in common is the need for a concrete operationalization, using data from the real world, to be able to test models, for example, in computational sandboxes such as ABM... But how can these models be operationalized? With which data and for what use?

This panel will discuss democratic economic planning from the perspective of its potential practical application. The central question will be: "If we wanted to implement democratic economic planning in a society today, which quantitative and qualitative models and data would we require, and how would we interpret them?"

Two research teams are trying to answer this question, taking different research paths. Iacob Gagné-Montcalm and Simon Tremblay-Pepin are working on applying democratic economic planning to the case of Québec, currently a province of Canada, using the macroeconomic data available through official statistical institutions. Jakob Heyer and Walther Zeug are using the methods and data provided by the life-cycle analysis of commodities in capitalism to see how they could be used to understand a planning process in a postcapitalist society.

T - Solidarity in the Care Economy

10:30 - 12:00 Saturday, 12th July, 2025 518C Track *T: Health Session type On-site (Palais des Congrès) Isabel B. Perera Reflecting this year's theme, this panel brings together scholars from various fields and disciplines to explore solidarity of health in the care economy, broadly construed. Many affluent countries have shifted from economies rooted in the production of goods to those centered in the provision of services. Meanwhile, politics in many countries have shifted from battles over redistribution to so-called second-dimension issues related to sexuality, law and order, and national homogeneity. As the population continues to age, how will this shape the politics of health spending–among the single largest sources of economic activity in most post-industrial economies? Under what conditions are care workers able to secure power and build solidarity across occupations and racial and ethnic differences? Are second-dimension issues truly distinct from "bread and butter" economic ones–or do they have important material dimensions hitherto under-researched? To begin answering these questions, presenters will share work on the causes and consequences of health spending; the varying cross-national politics of childcare; the historical development of the front-line health care workforce; perceptions of health inequality and healthcare deservingness; and economic drivers of same-sex couple mobility under repressive laws. The panel promises to advance our understanding of solidarity across space, time, lifecycles and socioeconomic status.

MC12/I - Towards a practical application of democratic economic planning: the question of operationalization and data

10:30 - 12:00 Saturday, 12th July, 2025 521B

Track MC12 with Network I: First INDEP conference: Democratic Economic Planning... Session type On-site (Palais des Congrès) Sophie Elias-Pinsonnault

Many recent publications show an interest in democratic economic planning (DEP) as an alternative to capitalism. DEP is not a unified proposal based on only one universal model. On the contrary, it is subject to a widespread and mostly qualitative debate, and many options and models circulate and are discussed. Nevertheless, one element all DEP models have in common is the need for a concrete operationalization, using data from the real world, to be able to test models, for example, in computational sandboxes such as ABM... But how can these models be operationalized? With which data and for what use?

This panel will discuss democratic economic planning from the perspective of its potential practical application. The central question will be: "If we wanted to implement democratic economic planning in a society today, which quantitative and qualitative models and data would we require, and how would we interpret them?"

Two research teams are trying to answer this question, taking different research paths. Iacob Gagné-Montcalm and Simon Tremblay-Pepin are working on applying democratic economic planning to the case of Québec, currently a province of Canada, using the macroeconomic data available through official statistical institutions. Jakob Heyer and Walther Zeug are using the methods and data provided by the life-cycle analysis of commodities in capitalism to see how they could be used to understand a planning process in a postcapitalist society.
